I. INTRODUCTION

A **RISK FACTORS:**

Apart from the risk factors mentioned in SAI, following are some of the additional risk factors which investors are advised to go through before investing:

a) **STANDARD RISK FACTORS:**

- Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.
- Mutual Funds and securities investments are subject to market risks and there is no assurance or guarantee that the objectives of the Scheme will be achieved.
- As the price / value / interest rates of the securities in which the Scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on various factors and forces affecting the capital markets. The value of investments may be affected, inter-alia, by changes in the market, interest rates, changes in credit rating, trading volumes, settlement periods and transfer procedures; the NAV is also exposed to Price/Interest-Rate Risk and Credit Risk and may be affected inter-alia, by government policy, volatility and liquidity in the money markets and pressure on the exchange rate of the rupee.
- Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- BHARAT Bond ETF – April 2033 is the name of the Scheme & does not in any manner indicate either the quality of the Scheme or its future prospects and returns.
- The sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond the initial contribution of Rs. 1,00,000 made by it towards setting up the Fund.
- The Scheme is not a guaranteed or assured return Scheme.

b) **SCHEME SPECIFIC RISK FACTORS:**

The performance of the Scheme may be affected by changes in Government policies, general levels of interest rates and risks associated with trading volumes, liquidity and settlement systems, etc. Some of the Risks are listed below:

1. **Risks Associated with Fixed Income and Money Market Instruments:**

- **Interest rate risk:** Price of a fixed income instrument falls when the interest rates move up and vice-versa, which will affect the NAV accordingly.
- **Spread risk:** Investments in corporate bonds are exposed to the risk of widening of the spread between corporate bonds and gilts. Prices of corporate bonds tend to fall if this spread widens which will affect the NAV of the Scheme accordingly.
- **Credit risk or default risk:** Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest &/or principal payment obligations.
- **Liquidity:** The Risk of non execution of sale/purchase order due to low volumes is liquidity risk.
- **Reinvestment risk:** Interest rates may vary from time to time. The rate at which intermediate cash flows are reinvested may differ from the original interest rates on the security, which can affect the total earnings from the security.
- **Performance Risk:** Performance of the Scheme may be impacted with changes in factors, which affect the capital market and in particular the debt market.
- **Market risk:** Lower rated or unrated securities are more likely to react to developments affecting the market as they tend to be more sensitive to changes in economic conditions than higher rated securities.

2. Risk Factors associated with Exchange Traded Fund investing in Bonds:

i. Lack of Vibrant Secondary Market for Units of the Scheme:

Although the Units of the Scheme will be listed on the Stock Exchanges such as NSE and BSE, there can be no assurance that a vibrant secondary market for units of the Scheme will be developed or maintained by the Market Makers.

ii. Halting of Trading in Units of the Scheme:

Trading in the Units of the Scheme on NSE/BSE may be halted because of market conditions or for reasons that in view of NSE/BSE, SEBI or any other Regulatory authorities. Thus, active trading in the units of the Scheme is not advisable.

In addition, trading of the Units of the Scheme are subject to trading halts caused by extraordinary market volatility and pursuant to stock exchange and SEBI 'circuit filter' rules.

There can be no assurance that the requirements of NSE/BSE necessary to maintain the listing of the Units of the Scheme will continue to be met or will remain unchanged.

iii. Lack of secondary market depth:

In case of unit creation and unit redemption, the Scheme will have to either buy a basket of securities or sell a basket of securities. -. This requires an active secondary market for underlying securities at all points of time. A lack of depth in secondary market for underlying securities could hamper the efficient transaction in unit creation and unit redemption.

iv. Units of the scheme may trade at prices other than NAV:

Depending on the demand-supply dynamic, the units of the Scheme may either trade on the Stock Exchange above or below the NAV of the Scheme. This may give rise to arbitrage opportunities. However, the in-built mechanisms of unit creation and unit redemption in the form of Cash or in-kind is designed to reduce the arbitrage opportunity for market participants.

v. Regulatory Risk:

Any changes in Regulations by SEBI / RBI / Stock Exchange / GOI / and other decision makers may hamper the ability of the market participants in trading resulting into wider premium/discount to NAV.

vi. Asset Class Risk:

The returns from the types of Securities in which the Scheme invests may under-perform returns of general Securities markets or different asset classes. Different types of securities tend to go through cycles of out-performance and under-performance in comparison of Securities markets.

vii. Redemption Risk:

Investors should note that even though the Scheme is an open-ended Scheme, subscription/redemptions of Units of the Scheme directly with the Fund would be limited to such investors who have the ability to subscribe/redeem the units of the Scheme in specific Creation Size. Generally, these lot sizes are larger as compared to normal funds. Thus, even though this Scheme is open ended, due to large lot size, very few investors can directly subscribe and redeem the units of the Scheme. However, investors wishing to subscribe/redeem units in other than specific lot sizes can do so by buying/selling the same on NSE/BSE.

The AMC will endeavor to pay the redemption proceeds in Cash. However, depending on the market volatility, liquidity conditions, applicable regulatory provisions, investor request etc., the AMC may redeem the Units and make the payout either "in-kind" i.e. through slice of the entire bond Portfolio or in combination of both i.e. Cash and "in-kind".

- viii. Risk of Investment Strategy
As the Scheme would be primarily investing in the Bonds of CPSE or any other eligible entities, any government policy which will have an impact on central public sector enterprises, including any change in the disinvestment policy of the government, could impact the price of the underlying assets. This may have negative impact on the performance of the Scheme.
- ix. Risk of Credit Rating changes
It is understood that most of the CPSE securities have higher credit rating essentially due to government ownership and implied government support. Any potential change in government control, shareholding pattern, market perception, corporate action etc., could result in potential downgrade of credit rating of the Issuers. This may have negative impact on the performance of the Scheme.
- x. Risk of Investment in eligible securities
The Scheme's objective is to invest in CPSEs securities as defined in the Index. The Scheme will invest in the securities predominantly through private placement route. These securities are generally auctioned on Electronic Bidding Platforms (EBP) in anonymous manner through competitive bidding. It is quite possible that the Scheme may not be able to subscribe to these securities in sufficient quantities. This may result in sub-optimal asset allocation until the next bidding takes place.
- xi. Risk of variation in asset allocation as compared to the Index
The Scheme intends to accept "in-kind" unit creation request from investors. The criteria for securities eligible for "in-kind" subscription has been defined in this document. It is possible that the "in-kind" subscription may result in variation in asset allocation as compared to the Index asset allocation. However, the rebalancing provisions of the SEBI Regulations will be applicable.
- xii. Risk of sovereign rating change
The valuation of the CPSE securities is based on the shape of the sovereign bond yield curve. The level of sovereign bonds are, apart from other factors, dependent on the sovereign rating of India by global Credit Rating Agencies. Any potential change in India's sovereign credit rating may have direct impact on the levels of sovereign bonds which in turn may have impact on the CPSE securities.
- xiii. Risk of higher supply of CPSEs securities
There has been a sharp decline in the issuance of bonds of AAA-rated CPSE issuers since the onset of the pandemic. At the same time, the demand for high-quality CPSE issuers have remained robust. This has resulted in tightening of credit spread of AAA-rated CPSE issuers. Normalization in the CPSE issuances to the pre-pandemic level may cause credit spreads to widen at some point. This may result in decline in the value of underlying CPSE bonds.
- xiv. Lack of supply of eligible securities with desired maturity
The target maturity bond ETF structure has a pre-defined maturity date. This necessitates investment in securities maturing within 3 months before the maturity date of the Scheme. Any decline in potential supply of securities maturing within 3 months before the maturity date of the Scheme may expose the Scheme to the reinvestment risk or investing in lower yielding T-bills / TREPS in the maturing year of the Scheme. This may be detrimental to the investor interest.

- xv. Increase in supply of Tax-free bonds from CPSEs Issuers
The target maturity bond ETF structure is designed to provide investor with long-term fixed income asset allocation to high qualities CPSEs with better tax-adjusted returns in the current interest rate environment. Any potential increase in supply of Tax-free bonds from CPSEs issuer may adversely impact the demand and future growth of the Scheme.
- xvi. Risk of divergence in credit rating of the Scheme and the Index
The Scheme intends to invest in AAA rated CPSEs entities. Any potential credit rating downgrade will necessitate the Scheme to sell bonds of downgraded CPSEs entities at market level and invest in new AAA rated CPSEs entities. This exercise is dependent on the secondary market liquidity in affected CPSEs entities. In case if the Scheme is unable to liquidate these bonds in the open market, this will result in divergence in the credit rating composition between the Scheme and the Index.
- xvii. Risk of disinvestment / privatization of invested CPSE entities
The GOI has recently made several announcements regarding their intentions to either disinvest full or part of their holdings in several CPSE entities. In case if a CPSE entity, which is part of the portfolio, is privatized, it will result in exclusion from the Index. The Scheme will also be required to exit their positions at the prevailing market levels and reinvest the proceeds in CPSE entities at prevailing market levels. This may result in untoward volatility and undesirable outcome.

3. Risks associated with investing in Tri Party Repo through CCIL (TREPS):

Risk of exposure in the Triparty Repo settlement Segment provided by CCIL emanates mainly on two counts –

- a. Risk of failure by a lender to meet its obligations to make funds available or by a borrower to accept funds by providing adequate security at the settlement of the original trade of lending and borrowing under Triparty Repo transaction.
- b. Risk of default by a borrower in repayment.

4. Risk associated with Tracking error / Tracking difference

Tracking error / Tracking difference is the annualized standard deviation of the difference in daily returns between the underlying index and the NAV of the Index Fund.

Tracking errors / Tracking difference are inherent in any ETF and such errors may cause the schemes to generate returns which are not in line with the performance of the underlying index. Tracking error / Tracking difference could be the result of a variety of factors including but not limited to:

- Delay in the purchase or non-availability of CPSEs securities which are part of the Index
- Delay in liquidation of CPSEs bonds which have been removed by the Index
- Due to partial investment in Government securities, Repo in Government securities and TREPS
- Due to investment in eligible CPSEs issuer which are yet to be part of the Index
- Due to mismatch in the weight of the Index and the Scheme throughout life of the Scheme.
- Change in asset allocation between the Index and the Scheme in the last year of the Scheme.
- Difference in valuation of underlying bonds by the Index Provider and AMC's valuation providers.

5. Risks Associated with Segregated Portfolio

- 1) Unit holder holding units of Segregated Portfolio may not be able to liquidate their holdings till the recovery of money from the issuer.
- 2) Portfolio comprising of Segregated Portfolio may not realise any value or may have to be written down.
- 3) Listing of units of Segregated Portfolio in recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further trading price of units on the stock market may be significantly lower than the prevailing NAV.

D WHERE WILL THE SCHEME INVEST?

The Scheme shall invest in Bonds and money market instruments of the CPSE issuers as stated under the section 'Asset Allocation and Investment Pattern' with residual maturity in lines with but not exceeding the Maturity Date of the Scheme subject to availability and suitability.

In order to maintain minimum liquidity buffer to take care of the unanticipated redemption, the Scheme may invest a portion of its portfolio in Government Securities maturing on or before maturity date of the Scheme, TREPS and REPO in government bonds as indicated in asset allocation table.

The investment restrictions and limits as specified in the SID under heading 'Investment Restrictions', shall be applicable.

E INVESTMENT STRATEGY & APPROACH

- The Scheme will seek to deliver the investment results of the underlying index. The fund will seek to meet its investment objective by investing in individual securities which satisfy the criteria of the Underlying Index. The Fund will invest in bonds issued by CPSEs, PFIs and statutory bodies owned by Government of India maturing not beyond April 2033. The Fund is a target maturity fund that will terminate on April 18, 2033, on which date it will distribute its maturity proceeds (net assets) to the unit holders.
- The Scheme will follow a Buy & Hold strategy (buy and hold) where existing bonds are held till maturity unless sold for meeting redemptions. ETF will follow the index based on principle of risk replication i.e. manage weighted average maturity closer to that of the Index. The fund will use a representative sampling indexing strategy to manage the Fund. "Representative sampling" is an indexing strategy that involves investing in a representative sample of securities that collectively has an investment profile similar to that of an applicable underlying index. The securities selected are expected to have, in the aggregate, fundamental characteristics such as duration, maturity, credit ratings and yield along with liquidity measures similar to those of an applicable underlying index. The Fund may or may not hold all of the securities in the Underlying Index. Issuer weight will be decided based on the principles of diversification, availability of bonds, liquidity and suitability in the portfolio while keeping the risk in line with the index. ETF will also participate in new issuances by issuers which are currently not part of the index, but will eventually get included in the index during next rebalancing. ETF will participate in such issuance only if they meet all eligibility criteria as defined by the index.
- The Issuer weight of the Scheme will be in line with the Issuer weights in the Index subject to suitability and availability of the eligible CPSEs bonds from time to time.
- The Scheme may also participate in new issuances / private placement by the eligible issuers which are currently not part of the index but will eventually get included in the index during the next rebalancing period in line with Paragraph 3.5 of SEBI Master Circular dated May 19, 2023. The Scheme may participate in such issuances only if they meet all eligibility criteria as defined by the index and suitable from asset allocation perspective and other parameters of the Scheme.
- The Scheme may also invest a portion of its portfolio in Government securities maturing on or before the maturity date of the Scheme, Repo in government securities and TREPS to manage liquidity requirement.

Risk Mitigation Measures:

The Scheme will invest in securities of CPSEs/CPSUs/CPFIs and other Government organizations which are constituents of the underlying Index viz. Nifty BHARAT Bond Index – April 2033. Based on the availability of issuances, it is expected that the Portfolio allocation could be different than that of underlying index allocation and could result in Tracking Error. That said, broad risk parameters of the portfolio of the Scheme such as credit rating, weighted average YTM, weighted average maturity, asset allocation etc. are expected to be similar to the Underlying Index.

The Scheme may also invest a portion of its portfolio in Government securities maturing on or before the maturity date of the Scheme, Repo in government securities and TREPS to manage liquidity requirement.

This allocation will be monitored periodically and it shall be ensured that investments are made in accordance with the Scheme objective and within the regulatory and internal investment restrictions prescribed from time to time.

Since disciplined investing requires risk management, the AMC would incorporate adequate safeguards for controlling risks in the portfolio construction process.

The Scheme has a detailed process to identify, measure, monitor and manage various portfolio risks. The objective is to understand these risk and mitigate them wherever possible.

Few of the key risk identified are:

Risk & Description specific to the Scheme	Risk mitigants / Management Strategy
Market/Volatility Risk Risk arising due to price fluctuations and volatility, having material impact on the overall returns of the Scheme.	The Scheme, being a Target Maturity Date ETF structure, is expected to follow a Buy and Hold investment strategy in a passive manner. Based on that, we expect to mitigate intermittent price volatility in the underlying assets. Investors who remain invested until the maturity of the Scheme are expected to mitigate market / volatility risk to large extent.
Credit risk Risk associated with repayment of investment	The Scheme intends to invest in AAA rated bonds issued by CPSEs/CPSUs/CPFIs and other Government organizations. These CPSEs/CPSUs/CPFIs and other Government organizations are controlled by the Government of India. As a result the bond issued by them are considered as relatively safe.
Liquidity risk Risk arising due to inefficient Asset Liability Management, resulting in high impact costs	The Scheme intends to invest in AAA rated bonds issued by CPSEs/CPSUs/CPFIs and other Government organizations. In general, bonds issued by CPSEs entities enjoy higher level of secondary market liquidity.
Interest rate risk Price volatility due to movement in interest rates	The Scheme, being a Target Maturity Date ETF structure, is expected to follow a Buy and Hold investment strategy in a passive manner. All investments are in line with the maturity date of the Scheme and the underlying Index. This should help mitigate the interest rate risk.
Event risk Price risk due to company or sector specific event	The Scheme intends to invest in AAA rated bonds of CPSEs/CPSUs/CPFIs and other Government organizations. These bonds are perceived to be relatively safe with quasi sovereign risk due their government ownership

Portfolio Turnover:

The Scheme is a Target Maturity Date Exchange Traded Fund. It is expected to be managed in a passive manner. However, there may be request of subscriptions and redemption from Market Makers and Large Investors on periodic basis, which may necessitate transaction in underlying basket of eligible securities. In general, the portfolio turnover of the Scheme will depend upon the extent of request of unit creation and unit redemption received from Market Makers and Large investors, requirement to rebalance the portfolio on account of change in the credit rating, corporate event etc. It may be noted that in the last year of maturity of the Scheme, the Portfolio Turnover may increase on account of re-deployment of maturity proceeds realized from initial investment.

Tracking Error / Tracking difference:

Tracking Error / Tracking difference is divergence of the performance (return) of the Fund's portfolio from that of the Underlying Index. Based on that the availability of issuances by the CPSEs/CPSUs/CPFIs and other Government organizations, it is expected that the Portfolio allocation could be different than that of underlying index allocation and could result in Tracking Error / Tracking difference. That said, the risk parameters of the portfolio of the Scheme and underlying index would be similar.

The Fund will endeavor to keep the tracking error as low as possible. The fund shall disclose the tracking error based on past one year rolling data, on a daily basis, and tracking difference on a monthly basis, for tenures 1 year, 3 year, 5 year, 10 year and since the date of allotment of units on the AMC's and AMFI's website.

The annualized tracking difference averaged over one year period shall not exceed 1.25%. In case the average annualized tracking difference over one year period for Debt ETFs is higher than 1.25%, the same shall be brought to the notice of trustees with corrective actions taken by the AMC, if any.

- Each index in the series includes portfolio of AAA rated bonds issued by government owned entities
- All indices are reconstituted and rebalanced at the end of every calendar quarter

Methodology

The methodology is in compliance with the Norms for Debt Exchange Traded Funds (ETFs)/Index Funds announced by SEBI vide circular no. SEBI/HO/IMD/DOF2/P/CIR/2022/69 on May 23, 2022

- Public Financial Institutions (PFIs) owned and managed by GOI and not included in points 1 and 2 above
- Statutory body set-up by Act of Parliament and having outstanding bonds of more than Rs. 100 crores

Selection criteria for each BHARAT Bond Index:

- **Issuer Selection:**
 - Eligible issuers having credit rating of “AAA” (Triple A) at the time of index creation/review are shortlisted. In case an entity is rated by multiple rating agencies, the lowest rating assigned to the Non-Convertible Debenture/Long Term Debt of the entity is considered for the index selection purpose
 - Further, issuers from the above step which have individual total outstanding of more than Rs. 100 crores in eligible bonds maturing during the twelve months period prior to the maturity date of the corresponding index are selected for the index
- **Bond Selection:**
 - All eligible bonds of the issuers selected in the above step are to be considered as part of the index provided the term sheet (with requisite details for pricing) is available in public domain as of the cut-off date (NSE/BSE)

Weights Assignment for each BHARAT Bond Index:

Weights of bonds in each index in the series are based on total outstanding amount of each bond, subject to

- 15% single issuer weight cap in compliance with the Norms for Debt Exchange Traded Funds (ETFs)/Index Funds announced by SEBI vide circular no. SEBI/HO/IMD/DOF2/P/CIR/2022/69 on May 23, 2022 is applied at the time of index creation/review.
- Excess weight to be redistributed amongst rest of the issuers proportional to their original weights
- Any coupon amount received is assumed to be reinvested in the portfolio on the same date, in the proportion of the existing weights

Index Rebalancing/Reconstitution:

- On a quarterly basis, index will be screened for compliance with the Norms for Debt Exchange Traded Funds (ETFs)/Index Funds announced by SEBI vide circular no. SEBI/HO/IMD/DOF2/P/CIR/2022/69 on May 23, 2022. In case of non-compliance, suitable corrective measures will be taken to ensure compliance with the norms
- Each index in the series is reviewed at the end of each calendar quarter with data cut-off date being 15 working days (T-15) before last working day of calendar quarter (T). Changes shall be effective from last working day of calendar quarters (T) with a prior notice of 3 working days (T-3 being the portfolio disclosure date)
- During the quarterly index review, existing issuers and their bonds in each index in the series to be continued if they continue to meet the eligibility and selection criteria. Similarly, new issuances during previous calendar quarter shall be included in the index if they meet the eligibility and selection criteria
- During the quarterly review, the weights of all the bonds in each index in the series will reset based on total outstanding amount of each bond, subject to 15% single issuer limit in compliance with the Norms for Debt Exchange Traded Funds (ETFs)/Index Funds announced by SEBI vide circular no. SEBI/HO/IMD/DOF2/P/CIR/2022/69 on May 23, 2022
- In case any of the index constituent undergoes a scheme of arrangement for corporate events such as merger, spin-off, compulsory delisting or suspension etc., additional index reconstitution may be undertaken. The equity shareholders' approval to a scheme of arrangement is considered as a trigger to reset the combined issuer weight to 15% single issuer limit on the next rebalance date
- Based on the governments 'in principle approval' to disinvest its stake in some of the government owned entities, such entities are not included to be part of the index at launch/inception of each index in the series. On account of disinvestment in an existing constituent, such issuer shall be excluded from the index effective next rebalancing/reconstitution only if the disinvestment process has been completed
- In case a new eligible issuer gets downgraded post data cut-off date but before the portfolio disclosure date (T-3), such issuer shall not be included in the index series
- Apart from scheduled review, in case an existing issuer gets downgraded below AAA, bonds of such issuer to be excluded from the index within 30 calendar days from such downgrade, in compliance with the Norms for Debt Exchange Traded Funds (ETFs)/Index Funds announced by SEBI vide circular no. SEBI/HO/IMD/DOF2/P/CIR/2022/69 on May 23, 2022
- Due to the above stated reasons, if any index in the series is rebalanced and issuer/s move out of the index in the series,
 - If the total number of issuers in the index in the series is 8 and above, then the total weight of the securities being excluded will be redistributed among the remaining securities proportionally. This will be subject to 15% single issuer limit in compliance with the Norms for Debt Exchange Traded Funds (ETFs)/Index Funds announced by SEBI vide circular no. SEBI/HO/IMD/DOF2/P/CIR/2022/69 on May 23, 2022

P. INDIAN DEBT MARKETS - PILLARS OF THE INDIAN ECONOMY

India's bond market has witnessed a rapid growth in the last five years. The aggregate Face Value of bonds was Rs. 183 trillion (\$2.30 trillion) as on June 2022 according to data from RBI, SEBI and CCIL.

India's bond market comprises mainly of sovereign bonds, corporate bonds, and money market assets. Sovereign bonds comprised 70%; corporate bonds were 21% while money market assets comprised 9% of the aggregate Face Value of bonds as of June 2022.

Sovereign bonds are issued by the Government of India & Indian States to finance their budget deficits. The budget deficit is generally announced in the Union Budget for the next financial year. It is widely followed by the market participants for their analysis on the government finances. It forms the basis for India's monetary policy and demand-supply dynamic in the secondary market.

The Government of India typically funds a significant portion of its budget deficit by auctioning government bonds on weekly basis. The auction calendar is made public in advance. For last few years,

the government has made conscious efforts to auction bonds with residual maturity greater than ten years to lengthen its maturity profile. The government also auctions Treasury Bills on weekly basis to finance their short-term cash flow mismatches. The government's Treasury Bill auction calendar is also available for market participants in advance. The government auctions 91-day, 182-day, 364-day treasury bills on every Wednesday. Indian states also borrow in the bond market by auctioning State Development Loans (SDL) on every Tuesdays. These bonds are mostly purchased by Banks, Insurance companies as well as other market participants due to their sovereign nature, superior secondary market liquidity and statutory holding requirements by the regulators.

Indian corporate entities as well as Public Financial Institutions typically borrow wholesale money from the debt capital market. Primary supply of corporate bonds has been steadily increasing in the last three years in proportion to the increase in the demand for quality assets from mutual funds, insurance companies, foreign portfolio investors and pension funds.

As on June 30, 2022, size of the Indian government bond market is around 83 trillion, which is distributed amongst 98 unique issues. As compared to that India's corporate bond market is more fragmented. The total corporate bond market size is around Rs. 40 trillion, which is distributed amongst ~29,750 unique issues.

INTRODUCTION TO EXCHANGE TRADED FUNDS

ETFs are innovative products that provide exposure to an index or a basket of securities that trade on the exchange like a single stock. ETFs have a number of advantages over traditional open-ended index funds as they can be bought and sold on the Exchange at prices that are usually close to the actual Intra-Day NAV of the scheme. ETFs are an innovation to traditional mutual funds as ETFs provide investors a fund that closely tracks the performance of an index with the ability to buy / sell on an intra-day basis. Unlike listed close ended funds, which trade at substantial premiums or more frequently at discounts to net asset value, ETFs are structured in a manner which allows to subscription and redemption of units directly with the fund in creation size, thereby ensuring that ETFs trade close to their actual net asset values.

ETFs are usually passively managed funds wherein subscription / redemption of units work on the concept of exchange with underlying securities. In other words, large investors / Market Makers can also purchase units by depositing the underlying eligible securities with the mutual fund / asset management company and can redeem by receiving the underlying securities in exchange of units. Units can also be bought and sold directly on the exchange.

ETFs have all the benefits of indexing such as diversification, low cost and transparency. As ETFs are listed on the exchange, costs of distribution are much lower and the reach is wider. These savings in cost are passed on to the investors in the form of lower costs. Furthermore, exchange traded mechanism helps reduce minimal collection, disbursement and other processing charges.

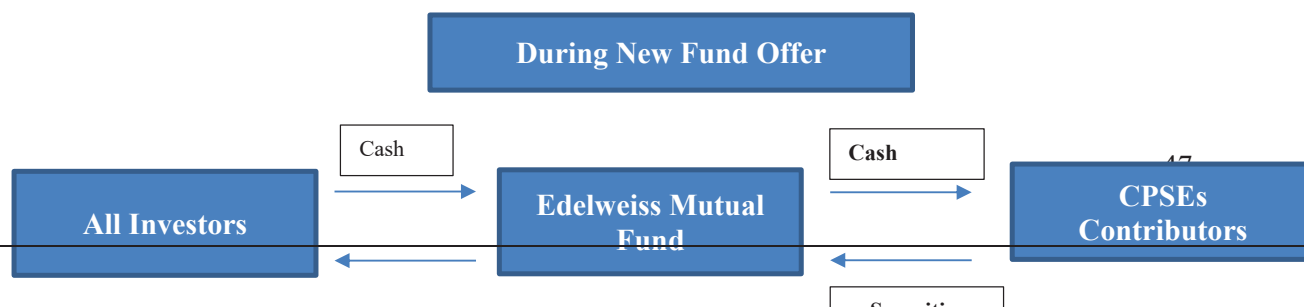

The structure of ETFs is such that it protects long-term investors from inflows and outflows of short-term Investor. This is because the mutual fund does not bear extra transaction cost when buying / selling due to frequent subscriptions and redemptions. Due to the creation / redemption of units through the in-kind mechanism the fund can keep lesser funds in cash.

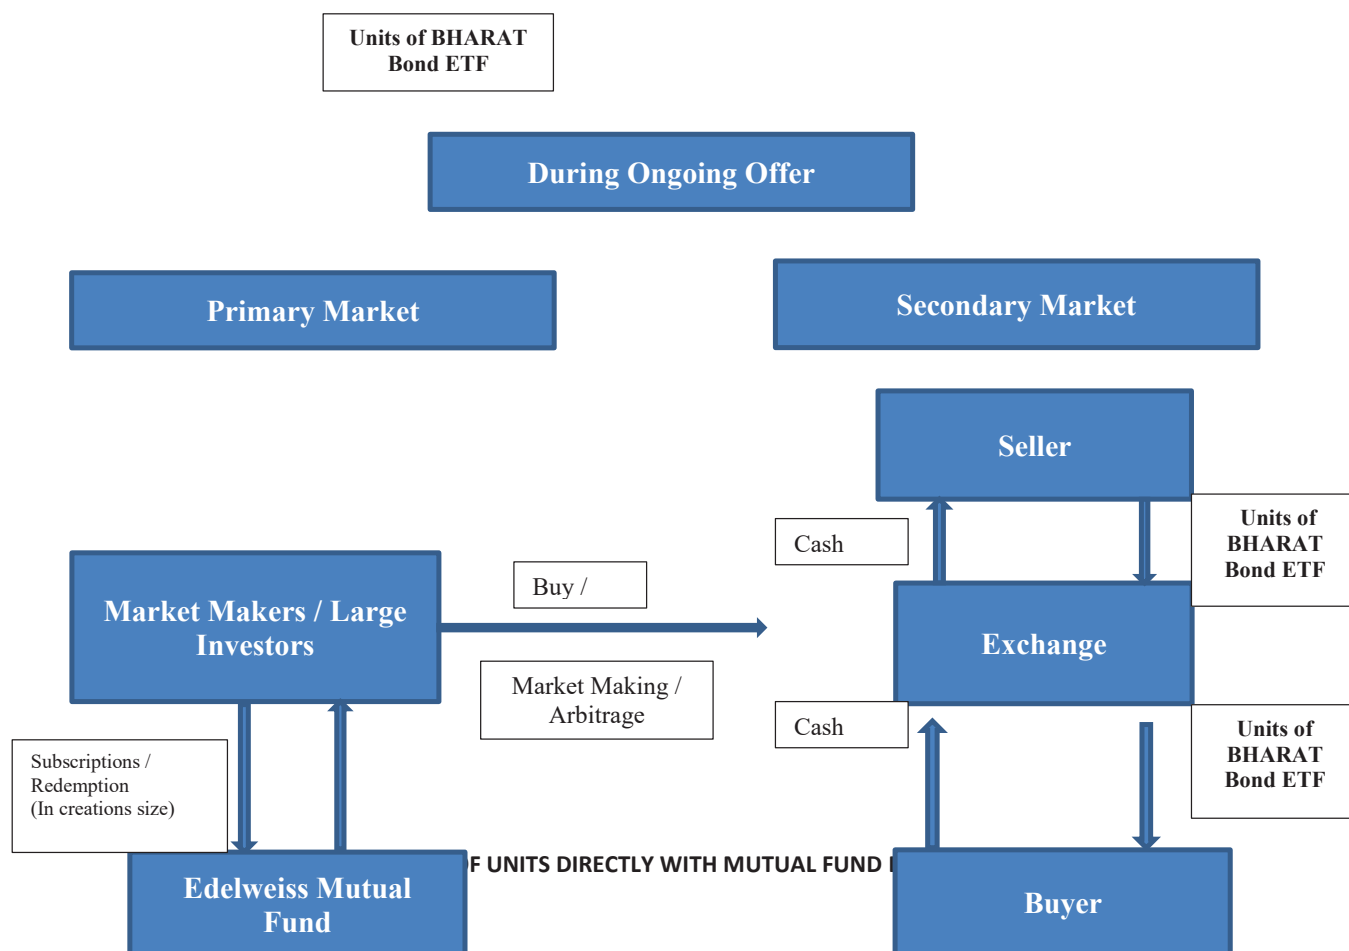

Benefits of ETFs

- Can be easily bought / sold like any other stock on the exchange through terminals spread across the country.
- Can be bought / sold anytime during trading hours at prices that are expected to be close to actual net asset value of the scheme. Thus, investor invests at real-time prices as opposed to end of day prices.
- No separate form filling for buying / selling units. It is just a phone call to your broker or a click on the internet.
- Minimum investment for an ETF is one unit.
- Protects long-term investors from the inflows and outflows of short-term investors.
- Underlying Index Constituents available on the website every day.
- Live price of the units is quoted on the exchange following every trade allowing investor to know the fair value of the portfolio.
- Bond ETF provides easy access to the Bond Market at low cost.
- Passive Investment Strategy helps lower Operational expenses as compared to actively managed bond fund.
- Target Maturity: Since the maturity of this ETF is determined, the investor can get the money back along with return on such maturity date.

For various scheme related risk factors investor are requested to read **RISK FACTORS** in detail.
