HIGHLIGHTS OF THE SCHEME

Type of Scheme	An open ended scheme investing in arbitrage opportunities																																		
Scheme Code	SBIM/O/H/ARB/06/03/0028																																		
Investment Objective	The investment objective of the Scheme is to provide capital appreciation and regular income for unitholders by identifying profitable arbitrage opportunities between the spot and derivative market segments as also through investment of surplus cash in debt and money market instruments.																																		
Asset Allocation	<p>Under normal circumstances, the anticipated asset allocation would be:</p> <table border="1"> <thead> <tr> <th rowspan="2">Type of Instrument</th><th colspan="2">Indicative Asset Allocation</th><th rowspan="2">Indicative Asset Allocation</th></tr> <tr> <th>Minimum</th><th>Maximum</th></tr> </thead> <tbody> <tr> <td>Equities and equity related instruments</td><td>65%</td><td>85%</td><td>High</td></tr> <tr> <td>Derivatives including Index Futures, Stock Futures, Index Options and Stock Options</td><td>65%</td><td>85%</td><td>High</td></tr> <tr> <td>Debt instruments and Money Market instruments**</td><td>15%</td><td>35%</td><td>Medium to Low</td></tr> </tbody> </table> <p>1. The notional value exposure in derivatives would be reckoned for the purposes of the specified limit.</p> <p>2. The margin money deployed on these positions would be included in the money market category</p> <p>3 Exposure to securitized debt will be not more than 10% of the net assets of the Scheme.</p> <p>When adequate arbitrage opportunities are not available in the Derivative and Equity markets, the anticipated alternate asset allocation on defensive considerations would be in accordance with the allocation given below. However, in case no arbitrage opportunity is available, then 100% of the remaining investible corpus (to the extent not deployed in arbitrage opportunities in the asset allocation pattern mentioned above) will be deployed in short term debt and money market instruments with tenure not exceeding 91 days (including investments in securitized debt).</p> <p>In this scenario also, the allocation in Equities and equity related instruments, Derivatives including index futures, stock futures, index options, and stock options, etc. will continue to be made in arbitrage opportunities only.</p> <table border="1"> <thead> <tr> <th rowspan="2">Type of Instrument</th><th colspan="2">Indicative Asset Allocation</th><th rowspan="2">Indicative Asset Allocation</th></tr> <tr> <th>Minimum</th><th>Maximum</th></tr> </thead> <tbody> <tr> <td>Equities and equity related instruments</td><td>0%</td><td>65%</td><td>High</td></tr> <tr> <td>Derivatives including Index Futures, Stock Futures, Index Options and Stock Options</td><td>0%</td><td>65%</td><td>High</td></tr> </tbody> </table>			Type of Instrument	Indicative Asset Allocation		Indicative Asset Allocation	Minimum	Maximum	Equities and equity related instruments	65%	85%	High	Derivatives including Index Futures, Stock Futures, Index Options and Stock Options	65%	85%	High	Debt instruments and Money Market instruments**	15%	35%	Medium to Low	Type of Instrument	Indicative Asset Allocation		Indicative Asset Allocation	Minimum	Maximum	Equities and equity related instruments	0%	65%	High	Derivatives including Index Futures, Stock Futures, Index Options and Stock Options	0%	65%	High

I. INTRODUCTION

A. RISK FACTORS

Standard Risk Factors

- a. Mutual funds and securities investments are subject to market risks and there is no assurance or guarantee that the Fund's objective will be achieved.
- b. As the price / value / interest rates of the securities in which the scheme invests fluctuates, the value of your investment in the scheme may go up or down
- c. Past performance of the Sponsor / AMC / Mutual Fund or its affiliates does not guarantee the future performance of the scheme(s) of the Mutual Fund.
- d. State Bank of India, the sponsor, is not responsible or liable for any loss resulting from the operation of the scheme beyond the initial contribution made by it of an amount of Rs. 5 lakhs towards setting up of the mutual fund.
- e. SBI Arbitrage Opportunities Fund is only the name of the Scheme and does not, in any manner, indicate either the quality of the Scheme or its future prospects and returns.
- f. The NAV of the Schemes' Units may be affected by change in the general market conditions, factors and forces affecting capital markets in particular, level of interest rates, various market related factors and trading volumes.
- g. The present scheme is not a guaranteed or assured return scheme.
- h. Investment in Mutual Fund Units involves investment risks such as trading volumes, settlement risk, liquidity risk, default risk including the possible loss of principal.

Scheme-specific Risk Factors

- i. The Trustees, AMC, Fund, their directors or their employees shall not be liable for any tax consequences that may arise in the event that the scheme is wound up for the reasons and in the manner provided under the Scheme Information Document (SID) & Statement of Additional Information (SAI).
- ii. Redemption by the Unit Holder due to change in the fundamental attributes of the Scheme or due to any other reasons may entail tax consequences. The Trustees, AMC, Fund their directors or their employees shall not be liable for any tax consequences that may arise.
- iii. The tax benefits described in the SID & SAI are as available under the present taxation laws and are available subject to relevant condition. The information given is included only for general purpose and is based on advice received by the AMC regarding the law and practice currently in force in India and the Investors and Unit Holders should be aware that the relevant fiscal rules or their interpretation may change. As in the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of the investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Investor / Unit Holder is advised to consult his/her/its own professional tax advisor.
- iv. SBI Arbitrage Opportunities Fund would be investing in equity & equity related instruments, including derivatives, debt and money market instruments. The liquidity of the scheme's investments is inherently restricted by trading volumes and settlement periods. In the event of an inordinately large number of redemption requests, or of a restructuring of the scheme's investment portfolio, these periods may become significant. In view of the same, the Trustees have the right in their sole discretion to limit redemptions (including suspending redemptions) under certain circumstances.

v. Risks associated with Stock Lending

Securities Lending is a lending of securities through an approved intermediary to a borrower under an agreement for a specified period with the condition that the borrower will return equivalent securities of the same type or class at the end of the specified period along with the corporate benefits accruing on the securities borrowed. There are risks inherent in securities lending, including the risk of failure of the other party, in which case the securities might go in for auction. In the event of exceptional circumstances resulting in non-availability of securities in auction, such transactions would be financially closed-out at appropriate rates as per exchange regulations. Besides, there will also be temporary illiquidity of the securities that are lent out and the Scheme(s) will not be able to sell such lent out securities until they are returned.

vi. Investments under the scheme may also be subject to the following risks:

- (a) Equity and equity related risk: Equity instruments carry both company specific and market risks and hence no assurance of returns can be made for these investments.
- (b) Credit risk: Credit risk is risk resulting from uncertainty in counterparty's ability or willingness to meet its contractual obligations. This risk pertains to the risk of default of payment of principal and interest. Government Securities have zero credit risk while other debt instruments are rated according to the issuer's ability to meet the obligations.
- (c) Liquidity Risk pertains to how saleable a security is in the market. If a particular security does not have a market at the time of sale, then the scheme may have to bear an impact depending on its exposure to that particular security.
- (d) Interest Rate risk is associated with movements in interest rate, which depend on various factors such as government borrowing, inflation, economic performance etc. The values of investments will appreciate/depreciate if the interest rates fall/rise.
- (e) Reinvestment risk: This risk arises from uncertainty in the rate at which cash flows from an investment may be reinvested. This is because the bond will pay coupons, which will have to be reinvested. The rate at which the coupons will be reinvested will depend upon prevailing market rates at the time the coupons are received.
- (f) Derivative risks: The derivatives will entail a counterparty risk to the extent of amount that can become due from the party. The cost of hedge can be higher than adverse impact of market movements. An exposure to derivatives in excess of the hedging requirements can lead to losses. An exposure to derivatives can also limit the profits from a genuine investment transaction. Efficiency of a derivatives market depends on the development of a liquid and efficient market for underlying securities and also on the suitable and acceptable benchmarks.

vii. Different types of securities in which the scheme would invest as given in the Scheme Information Document carry different levels of risk. Accordingly, the scheme's risk may increase or decrease depending upon the investment pattern. For e.g. corporate bonds carry a higher amount of risk than Government Securities. Further even among corporate bonds, bonds, which are AAA rated, are comparatively less risk than bonds, which are AA rated.

viii. The Mutual Fund is not assuring any IDCW nor is it assuring that it will make any IDCW distributions. All IDCW distributions are subject to the availability of distributable surplus and would depend on the performance of the scheme.

ix. Securitised debt investments under the scheme may also be subject to the following risks

- (a) Liquidity risk:-There is no assurance that a deep secondary market will develop for the instrument. This could limit the ability of the investor to resell them.
- (b) Limited Recourse: The instruments represent an undivided beneficial interest in the underlying receivables and do not represent an obligation of either the Issuer or the Seller or the

originator, or the parent or any affiliate of the Seller, Issuer and Originator. No financial recourse is available to the buyer of the security against the Investors' Representative.

- (c) Delinquency and Credit Risk: Delinquencies and credit losses may cause depletion of the amount available under the Credit Enhancement and thereby the Monthly Investor Payouts to the Holders may get affected if the amount available in the Credit Enhancement facility is not enough to cover the shortfall. On persistent default of an Obligor to repay his obligation, the Servicer may repossess and sell the Vehicle/ Asset. However many factors may affect, delay or prevent the repossession of such Vehicle/Asset or the length of time required to realize the sale proceeds on such sales. In addition, the price at which such Vehicle/Asset may be sold may be lower than the amount due from that Obligor.
- (d) Risks due to possible prepayments: Full prepayment of a contract may lead to an event in which investors may be exposed to changes in tenor and yield.
- (e) Bankruptcy of the Originator or Seller: If the service provider becomes subject to bankruptcy proceedings and the court in the bankruptcy proceedings concludes that either the sale from each Originator was not a sale then an Investor could experience losses or delays in the payments due under the instrument.

X. The risks involved in derivatives are:

- 1. The cost of hedge can be higher than adverse impact of market movements
- 2. The derivatives will entail a counter-party risk to the extent of amount that can become due from the party.
- 3. An exposure to derivatives in excess of the hedging requirements can lead to losses.
- 4. An exposure to derivatives can also limit the profits from a genuine investment transaction.
- 5. Efficiency of a derivatives market depends on the development of a liquid and efficient market for underlying securities and also on the suitable and acceptable benchmarks.
- 6. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

xi. Risk factors associated with repo transactions in corporate debt securities:

Corporate Bond Repo transactions are currently done on OTC basis and settled on non guaranteed basis. Credit risks could arise if the counterparty does not return the security as contracted on due date. The liquidation of underlying bonds in case of counterparty default would depend on the liquidity of the bond and market conditions at that time. This risk is largely mitigated, as the choice of counterparties is largely restricted and also haircuts are applicable on the underlying bonds depending on credit ratings. Also operational risks are lower as such trades are settled on a DVP basis.

In the event of the scheme being unable to pay back the money to the counterparty as contracted in case of transactions as a borrower, the counter party may dispose of the assets (as they have sufficient margin) and the net proceeds may be refunded to the Mutual Fund. Thus, the scheme may in remote cases suffer losses. This risk is normally mitigated by better cash flow planning to take care of such repayments.

xii. Risk control:

Investments in securities carry various risks such as inability to sell securities, trading volumes and settlement periods, interest rate risk, liquidity risk, default risk, reinvestment risk etc. Whilst such risks cannot be eliminated, they may be mitigated by diversification.

In order to mitigate the various risks, the portfolio of the Scheme will be constructed in accordance with the investment restriction specified under the Regulations which would help in mitigating certain risks relating to investments in securities market.

Further, the AMC has necessary framework in place for risk mitigation at an enterprise level. The Risk Management division is an independent division within the organization. Internal limits are defined and judiciously monitored. Risk indicators on various parameters are computed and are monitored on a regular basis. There is a Board level Committee, the Risk Management Committee of the Board, which enables a dedicated focus on risk factors and the relevant risk mitigants. For risk control, the following may be noted:

Liquidity risks:

The liquidity of the Scheme's investments may be inherently restricted by trading volumes, transfer procedures and settlement periods. Liquidity Risk can be partly mitigated by diversification, staggering of maturities as well as internal risk controls that lean towards purchase of liquid securities.

Interest Rate Risk:

Changes in interest rates affect the prices of bonds. If interest rates rise the prices of bonds fall and vice versa. A well-diversified portfolio may help to mitigate this risk.

Credit Risks:

Credit risk shall be mitigated by investing in rated papers of the companies having the sound back ground, strong fundamentals, and quality of management and financial strength of the Company.

Volatility risks:

There is the risk of volatility in markets due to external factors like liquidity flows, changes in the business environment, economic policy etc. The scheme will manage volatility risk through diversification.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme. In case the Scheme does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly the Scheme shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given 15 days notice to redeem his exposure over the 25 % limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

C. SPECIAL CONSIDERATIONS, IF ANY

(i) Termination of the scheme

The Trustees reserve the right to terminate the scheme at any time. Regulation 39(2) of the SEBI Regulations provides that any scheme of a mutual fund is to be wound up:

(a) on the happening of any event which, in the opinion of the Trustees, requires the scheme to be wound up; or

(b) if 75% of the Unit holders of a scheme pass a resolution that the scheme be wound up; or

(c) if SEBI so directs in the interest of the unit holders.

Where a scheme is wound up under the above Regulation, the trustees shall give notice within one day, disclosing the circumstances leading to the winding up of the scheme:

(a) to SEBI; and

(b) in two daily newspapers having circulation all over India & a vernacular newspaper circulating at the place where the mutual fund is formed.

Provided that where a scheme is to be wound up under clause (a) of sub-regulation (2), the trustees shall obtain consent of the unit holders participating in the voting by simple majority on the basis of one vote per unit and publish the results of voting within forty five days from the publication of notice under sub-regulation (3) of regulation 39.

Provided further that in case the trustees fail to obtain the required consent of the unitholders under clause (a) of sub-regulation (2), the schemes shall be reopened for business activities from the second business day after publication of results of the voting

In case of termination of the scheme, regulation 41 of the SEBI (mutual Funds) Regulations, 1996 shall apply.

(ii) Restrictions on Redemptions

In accordance with SEBI circular no. SEBI/HO/IMD/DF2/CIR/P/2016/57 dated May 31, 2016, the provisions of restriction on redemption (including switch out) in Schemes of SBI Mutual Fund are as under:

1. Restrictions may be imposed when there are circumstances leading to a systemic crisis or event that severely constricts the market liquidity or the efficient functioning of the market such as:

i. **Liquidity Issues:** When markets at large become illiquid affecting almost all securities rather than any issuer specific security.

ii. **Market failures, exchange closure:** When markets are affected by unexpected events which impact functioning of exchanges or the regular course of transactions. Such unexpected events could also be related to political, economic, military, monetary or other emergencies.

iii. **Operational Issues:** When exceptional circumstances are caused by force majeure, unpredictable operational problems and technical failures (e.g. a black out).

2. Restrictions on redemption may be imposed for a specified period of time not exceeding 10 Business Days in any period of 90 days.

3. When restrictions on redemption is imposed, the following procedure will be applied:

- No redemption requests upto Rs. 2 Lacs shall be subject to such restriction.
- Where redemption requests are above Rs.2 lakh, AMC shall redeem the first Rs.2 Lacs without such restrictions and remaining part over and above Rs.2 Lacs shall be subject to such restrictions.

Any restriction on Redemption of the units shall be made applicable only after specific approval of the Board of Directors of the Asset Management Company and Trustee Company. The approval from the AMC Board and the Trustee giving details of the circumstances and justification shall also be informed to SEBI immediately.

(iii) The Trustees, AMC, Fund, their directors or their employees shall not be liable for any tax consequences that may arise in the event that the scheme is wound up for the reasons and in the manner provided under the SID & SAI.

(iv) Redemption by the Unit Holder due to change in the fundamental attributes of the Scheme or due to any other reasons may entail tax consequences. The Trustees, AMC, Fund, their directors or their employees shall not be liable for any tax consequences that may arise.

C. SCHEME ASSET ALLOCATION

Under normal circumstances, the anticipated asset allocation would be:

Type of Instrument	Indicative Asset Allocation		Indicative Asset Allocation
	Minimum	Maximum	
Equities and equity related instruments	65%	85%	High
Derivatives including Index Futures, Stock Futures, Index Options and Stock Options	65%	85%	High

- 3 Exposure to securitized debt will be not more than 10% of the net assets of the Scheme.

When adequate arbitrage opportunities are not available in the Derivative and Equity markets, the anticipated alternate asset allocation on defensive considerations would be in accordance with the allocation given below. In this scenario also, the allocation in Equities and equity related instruments, Derivatives including index futures, stock futures, index options, and stock options, etc. will continue to be made in arbitrage opportunities only.

Type of Instrument	Indicative Asset Allocation		Indicative Asset Allocation
	Minimum	Maximum

The cumulative gross exposure through equity and equity related instruments (including derivatives), debt (including Money Market Instrument will not exceed 100% of the net assets of the scheme.

The Scheme shall invest in repo in corporate debt securities.

The above investment pattern is indicative and may be changed by the Fund Manager from time to time, keeping in view market conditions, market opportunities, applicable regulations, legislative amendments and other political and economic factors. It must be clearly understood that the percentages stated above are only indicative and not absolute and that they can vary substantially depending upon the perception of the AMC, the intention being at all times to seek to protect the interests of the Unit Holders.

Pursuant to SEBI Circular no. SEBI/HO/IMD/IMD-II DOF3/P/CIR/2022/39 dated March 30, 2022 .in case the fund manager for any reason is not able to rebalance the asset allocation due to passive breaches (occurrence of instances not arising out of omission and commission of AMC) within 30 business days from the date of deviation , justification in writing, including details of efforts taken to rebalance the portfolio shall be placed before Investment Committee. The Investment Committee, if so desires, can extend the timelines up to sixty (60) business days from the date of completion of mandated rebalancing period. Further, it will follow timelines for rebalancing of portfolios of Mutual Fund Schemes, reporting & disclosure requirements in pursuant to the circular SEBI/HO/IMD/IMD-II DOF3/P/CIR/2022/39 dated March 30, 2022. The funds raised under the scheme shall be invested only in transferable securities as per Regulation 44(1), Schedule 7 of the SEBI (Mutual Funds) Regulations, 1996.

The Scheme may invest in other Schemes managed by the AMC or in the Schemes of any other Mutual Fund(s), provided such investment is in conformity to the investment objectives of the Scheme and in terms of the prevailing Regulations.

E. INVESTMENT STRATEGIES

Market neutral trading strategy. Arbitrage opportunities arise due to market inefficiencies. Fund seeks to exploit such inefficiencies that will manifest as mis -pricing in cash (stock) and derivative markets. Fund Manager will lock into such arbitrage opportunities seeking to generate tax efficient risk free returns.

Fund will not take naked exposures to stocks i.e. will not invest in stocks with a view to generate market related returns. Exposure to stocks will be offset by simultaneous equivalent exposure in derivatives.

SEBI has also vide circular DNP/Cir-29/2005 dated 14th September 2005 permitted Mutual Funds to participate in the derivatives market at par with Foreign Portfolio Investors (FPI). Accordingly, Mutual Funds shall be treated at par with a registered FII in respect of position limits in index futures, index options, stock options and stock futures contracts. These guidelines have been further revised vide SEBI circular DNP/Cir-31/2006 dated September 22nd, 2006.

The scheme would be a "pure arbitrage fund" and would hold spot market positions only for the purpose of arbitrage opportunities and not to benefit from any upside potential that the stocks may provide in the present or in future. In cases where gainful arbitrage opportunities does not exist, the scheme may hold its assets in debt and money market instruments till such time reasonable arbitrage opportunities present itself.

The scheme would seize arbitrage opportunities by buying stock in the spot market of NSE or BSE and simultaneously selling futures on the same stock in F&O segment of NSE when the price of the future exceeds the price of the stock. It is the intention of the scheme to hold the cash/spot market position and the derivative position till expiry to realize the arbitrage.

However, if the opportunity is available the same positions will be rolled over to next month expiry by buying the current month future and selling the next month future. In this instance, the strategy would be to keep the underlying, buy back the current future position and sell the next month future position.

A few illustrations of the possible arbitrage positions that the scheme may undertake:

a. Arbitrage:

Buy 1000 stocks of Company A at Rs 100 and sell the equivalent of stocks future of the Company A at Rs 101.

1. Market goes up and the stock end at Rs 150.

At the end of the month the future expires automatically:

- (i) At the settlement date we assume that future price = closing spot price = Rs 150

- a. Gain on stock is $1000 \times (150 - 100) = \text{Rs } 50000$
- b. Loss on future is $1000 \times (101 - 150) = \text{Rs } - 49000$
- c. Then gain realized is $50000 - 49000 = \text{Rs } 1000$

2. Market goes down and the stock end at Rs 50.

At the end of the month the future expires automatically:

(ii) At the settlement date we assume that future price = closing spot price = Rs 50

a. Loss on stock is $1000 \times (50 - 100) = \text{Rs } - 50000$

b. Gain on future is $1000 \times (101 - 50) = \text{Rs } 51000$

Then gain realized is $51000 - 50000 = \text{Rs } 1000$

b. Unwinding an arbitrage position:

Buy 1000 stocks of Company A at Rs. 100 and sell the equivalent of stocks future of the Company A at Rs. 101.

The market goes up and at some point of time during the month the stock trades at Rs. 150 and the future trades at Rs. 149 then we unwind the position:

1. Buy back the future at Rs. 149: loss incurred is $(101 - 149) \times 1000 = \text{Rs. } - 48\,000$
2. Sell the stock at Rs. 150 : gain realized : $(150 - 100) \times 1000 = \text{Rs. } 50\,000$
3. Net gain is $50\,000 - 48\,000 = \text{Rs. } 2\,000$

c. Roll over the futures:

We keep the stocks position. If the stocks level is at Rs 150 close to the expiry the stock future is close to Rs 150 as well. Then if the actual stock future is below the next month stock future, we roll over the future position to the next expiry:

- a. Stock future next month is at Rs 151
- b. Stock future actual month is at Rs 150
- c. Then sell future next month at Rs 151 and buy back actual future at Rs 150 => gain of $1000 \times (151 - 150) = \text{Rs } 1000$ and the arbitrage is continuing.

In case, the future price trades at discount to spot price (any time during the period till the expiry date) then the original position will be squared by buying the future and selling the spot market position.

d. Multi option arbitrage

For a given Index:

- Buy 1,000 Index Futures at Rs 100
- Sell 1,000 European Call options, Strike price 100 at Rs 10
- Buy 1,000 European Put options, Strike price 100 at Rs 8

i. Market goes up and the Index ends at Rs 150.

At the end of the month, the In-The-Money Call options are exercised automatically (at the settlement date we assume that the In-The-Money Call price = closing spot price = Rs 150). Put options will not be exercised.

- Gain on index futures is $1,000 \times (150 - 100) = \text{Rs } 50,000$
 - Loss (cost of) Put option is $1000 \times (8) = \text{Rs } 8,000$
 - Loss on Call is $1,000 \times (50 - 10) = \text{Rs } 40,000$
- Net Gain is Rs. $2,000 (50,000 - 8,000 - 40,000)$

ii. Market goes down and the Index ends at Rs 50.

At the end of the month, the In-The-Money Put options are exercised automatically (at the settlement date we assume that the In-The-Money Put price = closing spot price = Rs 50). Call option will not be exercised.

- Loss on index futures is $1,000 \times (50 - 100) = \text{Rs } - 50,000$
- Gain on Call is $1,000 \times 10 = \text{Rs } 10\,000$
- Gain realized on Put is $1000 \times (50 - 8) = \text{Rs } 42,000$

Then gain realized is Rs $2,000 (42,000 + 10,000 - 50,000)$

The Mutual Fund has set exposure limits in respect of the various types of derivative transactions that are permitted by the SEBI guidelines as detailed under the Section 'Trading in Derivatives.'

Performance will depend on the Asset Management Company's ability to assess accurately and react to changing market conditions. The scheme may also enter into repurchase and reverse repurchase obligation in all securities held by it as per the guidelines and regulations applicable for such transactions.

Any investment in Government securities may be in securities supported by ability to borrow from the Treasury, or sovereign or state government guarantee, or supported by the Government of India / a State Government in any other manner. Further, the scheme may participate in securities lending and trade in derivatives as permitted under SEBI (MF) Regulations, 1996.

The above investment pattern is indicative and may be changed by the Fund Manager from time to time, keeping in view market conditions, market opportunities, applicable regulations, legislative amendments and other political and economic factors. It must be clearly understood that the percentages stated above are only indicative and not absolute and that they can vary substantially depending upon the perception of the AMC, the intention being at all times to seek to protect the interests of the Unit Holders. The funds raised under the scheme shall be invested only in securities as per Regulation 44(1), Schedule 7 of the SEBI (Mutual Funds) Regulations, 1996 as amended from time to time. Pending deployment of funds of the scheme in securities in terms of investment objectives of the scheme, the scheme may also invest in short term deposits of scheduled commercial banks as permitted under the Regulations.

There can be no assurance that the investment objective of the scheme will be realized. The scheme will also review these investments from time to time and the Fund Manager may churn the portfolio to the extent as considered beneficial to the investors.

F. DISCLOSURES PERTAINING TO SECURITIZED DEBT

Risk profile of securitized debt vis-a-vis risk appetite of the scheme

The risk of investing in securitized debt is similar to investing in debt securities. However, it differs from other debt securities in two ways:

- **Liquidity:** Typically the liquidity of securitized debt is less than similar debt securities.
- **Pre-payment:** For certain types of securitized debt (backed by mortgages, personal loans, credit card debt, etc.), there is an additional pre-payment risk. Pre-payment risk refers to the possibility that loans are repaid before they are due, which may reduce returns if the re-investment rates are lower than initially envisaged.

Policy relating to originators:

A securitization transaction involves sale of receivables by the originator (a bank, non-banking finance company, housing finance company, or a manufacturing/service company) to a Special Purpose Vehicle (SPV), typically set up in the form of a trust. Investors are issued rated Pass Through Certificates (PTCs), the proceeds of which are paid as consideration to the originator. In this manner, the originator, by selling his loan receivables to an SPV, receives consideration from investors much before the maturity of the underlying loans. Investors are paid from the collections of the underlying loans from borrowers. Typically, the transaction is provided with a limited amount of credit enhancement (as stipulated by the rating agency for a target rating), which provides protection to investors against defaults by the underlying borrowers.

The scheme will invest in instruments of the originator only if the originator has an investment grade rating. Over and above the credit rating assigned by credit rating agencies to the originator, SBI MF will conduct an additional evaluation on

- Previous track record on origination, servicing and performance of existing pools
- Willingness to pay, through credit enhancement facilities etc.
- Ability to pay
- Business risk assessment, wherein following factors are considered:
 - Outlook for the economy (domestic and global)
 - Outlook for the industry
 - Originator/Pool specific factors

For single loan PTC, credit evaluation of the underlying corporate will be carried out as with any other debt instruments

Risk mitigation strategies:

Risk mitigation strategies will depend on each asset class, whether they are unsecured loans or secured, seasoning, collection history, past recovery rates, originator's financial profile, servicing performance, etc. for each asset class. SBI MF will invest in pools with investment grade rating by SEBI recognised rating agencies. In addition, some specific risk mitigation measures will include

Risk	Mitigants
Credit Risk	Analysis of originator with respect to past track record, systems and processes, performance of pools, collateral adequacy and disclosure frequency; Analysis of specific pool with respect to nature of underlying asset, seasoning, loan sizes, loan to value ratio, geographical diversity, etc.
Counterparty Risk	Past track record of handling securitized transactions, disclosure adequacy and frequency
Legal Risk	Check with rating agency that investors' interest is not compromised, specific protection measures like bankruptcy remoteness, etc are built in Separate in-house legal opinion on transactions,
Market Risk	Liquidity, Prepayment and Interest Rate Risk Analysis and level of their mitigation through transaction structure and credit enhancements provided

The level of diversification with respect to the underlying assets, and risk mitigation measures for less diversified investments:

Framework that will be applied while evaluating investment decision relating to a pool securitization transaction:

Characteristics/ Type of Pool	Mortgage Loan	Commercial Vehicle and Construction Equipment	CAR	2 wheelers	Micro Finance Pools	Personal Loans	Single Sell Downs	Others
Approximate Average maturity (in Months)	60-120 months	12-48 months	12-48 months	12-24 months	12 months	12-36 months	NA	NA
Collateral margin (including cash, guarantees, excess interest spread, subordinate tranche)	5-20%	5-20%	5-20%	5-20%	10-30%	10-30%	NA	NA

Average single exposure range %	1-1.5%	1.5-2%	Retail	Retail	Retail	Retail	NA	NA

Information illustrated in the Table above, is based on the current scenario relating to Securitized Debt market and is subject to change depending upon the change in the related factors. The investment committee will review the above guidelines considering the extant RBI guidelines pertaining to securitization.

We endeavor to consider some of the important risk mitigating factors for securitized pool i.e.

- ⇒ Average original maturity of the pool: based on different asset classes and current market practices
- ⇒ Collateral margin including cash collateral and other credit enhancements
- ⇒ Loan to Value Ratio

- ⇒ Average seasoning of the pool, which is a key indicator of past pool performance
- ⇒ Default rate distribution
- ⇒ Geographical Distribution
- ⇒ Maximum single exposure: Retail pools (passenger cars, 2-wheelers, Micro finance, personal loans, etc) are generally well diversified with maximum and average single exposure limits within 1%.

As illustrated above, these factors vary for different asset classes and would be based on interactions with each originator as well as the credit rating agency

Minimum retention period of the debt by originator prior to securitization:

The AMC will invest in securitized debt as per final RBI guidelines issued on May 7, 2012 and as amended till date.

Minimum retention percentage by originator of debts to be securitized

The AMC will invest in securitized debt as per final RBI guidelines issued on May 7, 2012 and as amended till date.

The mechanism to tackle conflict of interest when the mutual fund invests in securitized debt of an originator and the originator in turn makes investments in that particular scheme of the fund

Investments made by the Scheme in any asset are done based on the requirements of the Scheme and is in accordance with the investment policy. All Investments are made entirely at an arm's length basis with no consideration of any existing / consequent investments by any party related to the transaction (originator, issuer, borrower etc.). Investments made in Securitised debt are made as per the Investment pattern of the Scheme and are done after detailed analysis of the underlying asset. There might be instances of Originator investing in the same scheme but both the transactions are at arm's length and avoid any conflict of interest.

The resources and mechanism of individual risk assessment with the AMC for monitoring investment in securitized debt

As with any other debt instruments, investment in securitized debt instruments will be closely monitored by a dedicated team of credit analysts, ratings of any such instruments will be continuously tracked and periodic performance report from Trustee and MIS from Originators, if any would be scrutinized closely

H. PORTFOLIO TURNOVER

The Portfolio Turnover is defined as the lower of the value of purchases or sales as a percentage of the average corpus of the Scheme during a specified period of time. The Asset Management Company does not have a policy statement on portfolio turnover. Generally, the Asset Management Company's portfolio management style is conducive to a low portfolio turnover rate. However, given the nature of the Scheme which follows a monthly cycle or rollover / positions the portfolio turnover is expected to be high. Further, there are trading opportunities that present themselves from time to time. These trading opportunities may be due to trading opportunities in equities, changes in interest rate policy by the Reserve Bank of India, shifts in the yield curve, credit rating changes or any other factors where in the opinion of the fund manager there is an opportunity to enhance the total return of the portfolio. It will be the endeavour of the fund manager to keep portfolio turnover rates as low as possible.

Portfolio Turnover ratio as on September 30, 2022: 13.34

I. TRADING IN DERIVATIVES

The Fund's trading in derivatives would be in line that is permitted by SEBI Regulations from time to time. The Fund may use any hedging techniques that are permissible now or in future, under SEBI regulations, in consonance with the scheme's investment objective, including investment in derivatives such as interest rate swaps. The Fund shall fully cover its position in the derivatives market by holding underlying securities / cash or cash equivalents / option and / or obligation for acquiring underlying assets to honour the obligations contracted in the derivatives market. The Fund shall maintain separate records for holding the cash and cash equivalents / securities for this purpose. The securities held shall be marked to market by the AMC to ensure full coverage of investments made in derivative products at all times.

SEBI has also vide circular DNP/Cir-29/2005 dated 14th September 2005 permitted Mutual Funds to participate in the derivatives market at par with Foreign Portfolio Investors (FPI). Accordingly,

I. Position Limit

Illustrations

i. Arbitrage:

Buy 1000 stocks of Company A at Rs 100 and sell the equivalent of stocks future of the Company A at Rs 101.

1. Market goes up and the stock end at Rs 150.

At the end of the month the future expires automatically:

At the settlement date we assume that future price = closing spot price = Rs 150

a. Gain on stock is $1000 \times (150 - 100) = \text{Rs } 50000$

b. Loss on future is $1000 \times (101 - 150) = \text{Rs } -49000$

c. Then gain realized is $50000 - 49000 = \text{Rs } 1000$

2. Market goes down and the stock end at Rs 50.

At the end of the month the future expires automatically:

At the settlement date we assume that future price = closing spot price = Rs 50

a. Loss on stock is $1000 \times (50 - 100) = \text{Rs } -50000$

b. Gain on future is $1000 \times (101 - 50) = \text{Rs } 51000$

Then gain realized is $51000 - 50000 = \text{Rs } 1000$

ii. Unwinding an arbitrage position:

Buy 1000 stocks of Company A at Rs 100 and sell the equivalent of stocks future of the Company A at Rs 101.

The market goes up and at some point of time during the month the stock trades at Rs 150 and the future trades at Rs 149 then we unwind the position:

1. Buy back the future at Rs 149 : loss incurred is $(101 - 149) \times 1000 = \text{Rs } -48000$

2. Sell the stock at Rs 150 : gain realized : $(150 - 100) \times 1000 = \text{Rs } 50000$

3. Net gain is $50000 - 48000 = \text{Rs } 2000$

iii. Roll over the futures:

In this case we keep the underlying stock position intact and roll over the futures position into next month. For example, if the underlying stock is trading around Rs 150 on or closer to the expiry date, the stock future is also generally likely to trade closer to similar levels. In such a case, if the next month futures are trading at levels higher than the current month futures, we roll over the future position to the next month (i.e. instead of letting the current month future expire (on expiry day), we buyback the current month future and sell the next month future in its place, keeping the underlying stock position unchanged):

- a. Stock future next month is at Rs 151
- b. Stock future actual month is at Rs 150
- c. Then sell future next month at Rs 151 and buy back actual future at Rs 150 => gain of $1000 \times (151 - 150) = \text{Rs } 1000$ and the arbitrage is continuing.

In case, the future price trades at discount to spot price (any time during the period till the expiry date) then the original position will be squared by buying the future and selling the spot market position.

Debt Derivatives

The Scheme may use derivatives instruments like Interest Rate Swaps, Forward Rate Agreements or such other derivative instruments as may be introduced from time to time for the purpose of hedging and portfolio balancing and as may be permitted under the Regulations and guidelines.

Interest Rate Swaps

Interest rate swap is a strategy in which one party exchanges a stream of interest for another party's stream. Interest rate swaps are normally 'fixed against floating', but can also be 'fixed against fixed' or 'floating against floating' rate swaps. Interest rate swaps will be used to take advantage of interest-rate fluctuations, by swapping fixed-rate obligations for floating rate obligations, or swapping floating rate obligations to fixed-rate obligations. A floating-to-fixed swap increases the certainty of an issuer's future obligations. Swapping from fixed-to-floating rate may save the issuer money if interest rates decline. Swapping allows issuers to revise their debt profile to take advantage of current or expected future market conditions.

Forward Rate Agreement (FRA)

A FRA is basically a forward starting IRS. It is an agreement between two parties to pay or receive the difference between an agreed fixed rate (the FRA rate) and the interest rate (reference rate) prevailing on a stipulated future date, based on a notional principal amount for an agreed period. The only cash flow is the difference between the FRA rate and the reference rate. As is the case with IRS, the notional amounts are not exchanged in FRAs.

i) Advantages of Derivatives

The volatility in Indian debt markets has increased over last few months. Derivatives provide unique flexibility to the Scheme to hedge part of their portfolio. Some of the advantages of specific derivatives are as under:

ii) Interest Rate Swaps and Forward rate Agreements

Bond markets in India are not very liquid. Investors run the risk of illiquidity in such markets. Investing for short-term periods for liquidity purposes has its own risks. Investors can benefit if the Fund remains in call market for the liquidity and at the same time take advantage of fixed rates by entering into a swap. It adds certainty to the returns without sacrificing liquidity.

v. Illustration: Interest Rate Swap (IRS)

Assume that a Mutual Fund has INR 10 crore, which is to be deployed in overnight products for 7 days. This money will be exposed to interest rate risk on daily basis. The fund can buy an Interest Rate Swap receiving fixed interest rate and paying NSE MIBOR.

The deal will be as under:

Counterparty Bank
Fund

Mutual

Pays

----->Receives

2. Mutual Funds shall not write options or purchase instruments with embedded written options.
3. The total exposure related to option premium paid must not exceed 20% of the net assets of the scheme.
4. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.
5. Exposure due to hedging positions may not be included in the above mentioned limits subject to the following:
 - a. Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
 - b. Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under limits mentioned in Point 3.
 - c. Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
 - d. The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.
6. Mutual Funds may enter into plain vanilla Interest Rate Swaps (IRS) for hedging purposes. The value of the notional principal in such cases must not exceed the value of respective existing assets being hedged by the scheme.
In case of participation in IRS is through over the counter transactions, the counter party has to be an entity recognized as a market maker by RBI and exposure to a single counterparty in such transactions should not exceed 10% of the net assets of the scheme. However, if mutual funds are transacting in IRS through an electronic trading platform offered by the Clearing Corporation of India Ltd. (CCIL) and CCIL is the central counterparty for such transactions guaranteeing settlement, the single counterparty limit of 10% shall not be applicable
7. Exposure due to derivative positions taken for hedging purposes in excess of the underlying position against which the hedging position has been taken, shall be treated under the limits mentioned in point 3.
8. Definition of Exposure in case of Derivative Positions
9. Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur on a position. However, certain derivative positions may theoretically have unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts

II. The risks involved in derivatives are:

1. The cost of hedge can be higher than adverse impact of market movements

2. The derivatives will entail a counter-party risk to the extent of amount that can become due from the party.
3. An exposure to derivatives in excess of the hedging requirements can lead to losses.
4. An exposure to derivatives can also limit the profits from a genuine investment transaction.
5. Efficiency of a derivatives market depends on the development of a liquid and efficient market for underlying securities and also on the suitable and acceptable benchmarks.
6. Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and decision of fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

III. Methods to tackle these risks:

1. Hedging will not be done on a carpet basis but based on a view about interest rates, economy and expected adverse impact.
2. Limits of appropriate nature will be developed for counter parties
3. Such an exposure will be backed by assets in the form of cash or securities adequate to meet cost of derivative trading and loss, if any, due to unfavorable movements in the market.

IV. The losses that may be suffered by the investors as a consequence of such investments:

1. As the use of derivatives is based on the judgment of the Fund Manager, the view on market taken may prove wrong resulting in losses.
2. The upside potential of investments may be limited on account of hedging which may cause opportunity losses.

V. The use of derivatives for hedging will give benefit of:

1. Curtailing the losses due to adverse movement in interest rates
2. Securing upside gains at cost

VI. VALUATION OF DERIVATIVES

- i. The traded derivatives shall be valued at market price in conformity with the stipulations of sub clauses (i) to (v) of clause 1 of the Eighth Schedule to the SEBI Regulations.
- ii. The valuation of untraded derivatives shall be done in accordance with the valuation method for untraded investments prescribed in sub clauses (i) and (ii) of clause 2 of the Eighth Schedule to the SEBI Regulations.

VII. REPORTING OF DERIVATIVES

The AMC shall cover the following aspects in their reports to trustees periodically, as provided for in the Regulations:

- i. Transactions in derivatives, both in volume and value terms.
- ii. Market value of cash or cash equivalents / securities held to cover the exposure.
- iii. Any breach of the exposure limit laid down in the scheme Information document.

- iv. Shortfall, if any, in the assets covering investment in derivative products and the manner of bridging it.

P. DEBT MARKET IN INDIA

The Indian debt markets are one of the largest and rapidly developing markets in Asia. Government and Public-Sector enterprises are the predominant borrowers in the market. The debt markets have received lot of regulatory and governmental focus off late and are developing fast, with the rapid introduction of new instruments including derivatives. Foreign Portfolio Investors are also allowed to invest in Indian debt markets subject to ceiling levels announced by the government. There has been a considerable increase in the trading volumes in the market. The trading volumes are largely concentrated in the Government of India Securities, which contribute a significant proportion of the daily trades.

The money markets in India essentially consist of the call money market (i.e. market for overnight and term money between banks and institutions), repo transactions (temporary sale with an agreement to buy back the securities at a future date at a specified price), commercial papers (CPs, short term unsecured promissory notes, generally issued by corporates), certificate of deposits (CDs, issued by banks) , Treasury Bills (issued by RBI) and the CBLO (collateralized lending and borrowing facility).

Government securities are largely traded on a Negotiated Order Matching system (NDS OM) apart from the OTC market. The settlement of trades both in the Gsec markets and the overnight repo and CBLO are guaranteed and done by a central counterparty, the Clearing corporation of India (CCIL). Money market deals involving CD's and CP's are traded and settled on an OTC basis. The clearing and settlement of corporate bond deals are now routed through a central counterparty established by the exchanges BSE (ICCL) and NSE (NSCCL) which settles deals on a DVP (Delivery versus payment) non guaranteed basis.

The current market yields of various instruments and the factors affecting prices of such securities are given hereunder. The securitized instruments of higher ratings generally offer yields which are 50-75 basis points higher than the comparable normal debt instruments.

Following are the yield matrix of various debt instruments as on October 12, 2022:

Instruments	Indicative yield range
Overnight rates	6% - 6.10%
90 day Commercial Paper	6.75% - 6.85%
91-day T-bill	6.30% - 6.35%
1 year G-Sec	7.01% - 7.05%
5 year G – Sec	7.40% - 7.45%
10 year G-Sec	7.40% - 7.45%
1 year AAA Bond	7.65% - 7.75%
5 year AAA Bond	7.65% - 7.70%

The interest rate market conditions are influenced by the Liquidity in the system, Credit growth, GDP growth, Inflows into the Country, Currency movement in the Forex market, demand and supply of issues and change in investors' preference. Generally, when there is a rise in interest rates the price of securities fall and vice versa. The extent of change in price shall depend on the rating, tenor to maturity, coupon and the extent of fall or rise in interest rates. The Government securities carry zero credit risk, but they carry interest rate risk like any other Fixed Income Securities. Money market instruments such as CP's and CD's which are fairly liquid are not listed in exchanges. The impact cost of offloading the various asset classes differ depending on market conditions and may impair the value of the securities to that extent. Further, investments in securitized instruments or structured obligation papers carry a higher illiquidity risk. They also carry limited recourse to the originator, delinquency risk out of the defaults on the receivables and prepayment risk which affects the yields on the instruments.

Q. INVESTMENTS OF AMC IN THE SCHEME

In accordance with Regulation 25(16A), the asset management company shall invest such amounts in such schemes of the mutual fund, based on the risks associated with the schemes, as may be specified by the Board from time to time. But the AMC shall not be entitled to charge any management fees on this investment in the scheme. Investments by the AMC will be in accordance with Regulation 25(17) of the SEBI (MF) Regulations, 1996 which states that:

"The asset management company shall not invest in any of its schemes unless full disclosure of its intention to invest has been made in the **Scheme Information Document (SID)**, provided that the asset management company shall not be entitled to charge any fees on its investment in the scheme."

R. INVESTMENTS IN OTHER SCHEMES

According to the Clause 4 of Schedule 7 read with Regulation 44(1), of the SEBI (MF) Regulations, 1996:

"A scheme may invest in another scheme under the same asset management company or any other mutual fund without charging any fees, provided that aggregate inter-scheme investments made by all schemes under the same management or in schemes under the management of any other asset management company shall not exceed 5% of the net asset value of the mutual fund."

S. STOCK LENDING

The scheme may also engage in stock lending. Stock lending means the lending of stock to another person or entity for a fixed period of time, at a negotiated compensation. The securities lent will be returned by the borrower on expiry of the stipulated period. The Fund may in future carry out stock-lending activity under the scheme, in order to augment its income. Stock lending may involve risk of default on part of the borrower. However, this risk will be substantially reduced as the Fund has opted for the "Principal Lender Scheme of Stock Lending", where entire risk of borrower's default rests with approved intermediary and not with the Fund. There may also be risks associated with Stock Lending such as liquidity and other market risks. Any stock lending done by the scheme shall be in accordance with any Regulations or guidelines regarding the same. The AMC will apply the following limits, should it desire to engage in Stock Lending:

- (a) Not more than 20% of the net assets can generally be deployed in Stock Lending
- (b) Not more than 5% of the net assets can generally be deployed in Stock Lending to any single intermediary.

T. PROCEDURES FOLLOWED FOR INVESTMENT DECISION

The investment policy manual defines the broad guidelines for investments by various funds. Fund managers invest based on the offer document limits, regulatory limits and internal guidelines as set out in the Investment policy manual. Fund managers take input from the research team. The Head of Research will be heading the research team and will be responsible for the research output and performance. The transactions relating to the investments will be carried out by separate Debt and Equity Dealers. The processes and risks in the Investment activities will be monitored through a senior functionary reporting to the CIO. Investment committee is playing the role of governance and supervisory body for all investment related activities. The committee will hold a meeting on a periodic basis for a detailed review of portfolio holdings, scheme performance and investment strategy and also to ensure adherence to all internal processes. The Investment Committee monitors and supervises the investment decisions made by the Investment team and also monitors the risk parameters in each scheme to ensure that the investment limits are properly observed. The risk origination for the investments is done based on the guidelines issued by SEBI and Board of Trustees. Concurrent auditors periodically check the limits and their reports are placed before the Audit Committee, which is comprised of the independent Directors and Trustees.

Swing STP

Swing STP is a facility wherein investor can opt to transfer an amount at regular intervals from source scheme of SBI Mutual Fund (SBIMF) to a target scheme of SBIMF including a feature of reverse transfer from target scheme into the source scheme, in order to achieve the targeted market value on each transfer date in the target scheme. This ensures that the market value on each date of the transfer rises by a specified amount at every frequency irrespective of the market price. For example if investor decides that the value of their investment in the target scheme should appreciate by Rs. 1000 per month, then each month investor will invest only to the extent of the shortfall. If appreciation in the target scheme is higher than the target value then this excess value is reverse transferred to the source scheme. Thus the amount to be transferred will be arrived at on the basis of the difference between the target market value and the actual market value of the holdings in the target scheme on the date of transfer.

Terms & conditions of Swing STP are as follows:

1. Source scheme: All open ended schemes (Excluding SBI Long Term Equity Fund and ETF schemes) of SBI Mutual Fund.
2. Target scheme: Growth option in all open ended schemes (Excluding SBI Long Term Equity Fund and ETF schemes) of SBI Mutual Fund.

Quarterly Interval	1 st , 5 th , 10 th , 15 th , 20 th , 25 th & 30 th (In case of February last working day) The beginning of the quarter could be any month e.g. January, May, November, etc.	10th of every quarter

In case the date of transfer falls on a non-Business Day, the immediate next Business day will be considered for the purpose of determining the applicability of NAV and processing the transaction.

5. The minimum amount for the first installment shall be as follows:

(First installment amount X Number of installments including the current installment) – Market Value of the investments through Swing STP in the target scheme/plan/option on the date of transfer.

In case on the STP date, the amount (as specified above) to be transferred is not available in the source scheme/plan/option in the investor's folio, the residual amount will be transferred to the target scheme/plan/option and Swing STP will be closed. Investors have an option to consider earlier investments in the target scheme for calculating Swing STP amount.

9. Reverse Transfer: On the date of transfer, if the market value of the investments in the target scheme/plan/option through Swing STP is higher than the target market value (first installment amount X number of installments including the current installment), then a reverse transfer will be effected from the target scheme/plan/option to the source

D. NAV INFORMATION

NAV of the Scheme shall be computed and declared on every business day. The NAV under the Scheme would be rounded off to 4 decimals as follows or such other formula as may be prescribed by SEBI from time to time:

$$\text{NAV} = \frac{\text{Market or Fair Value of Scheme's investments} + \text{Current Assets} - \text{Current Liabilities and Provision}}{\text{No of Units outstanding under Scheme on the Valuation Date}}$$

NAV will be disclosed under SEBI (Mutual Funds) Regulations, 1996. NAV can also be viewed on www.sbimf.com and www.amfiindia.com.

The AMC shall update the NAVs on the website of Association of Mutual Funds in India - AMFI (www.amfiindia.com) by 11.00 p.m. on daily basis. In case of any delay, the reasons for such delay would be explained to AMFI and SEBI by the next day. If the NAVs are not available before commencement of business hours on the following day due to any reason, the Fund shall issue a press release providing reasons and explaining when the Fund would be able to publish the NAVs.

Further, as per SEBI Regulations, the repurchase price shall not be lower than 95% of the NAV.

Methodology for calculation of sale and re-purchase price of the units of mutual fund scheme:

Let's assume that the NAV of a Mutual Fund Scheme on April 01, 2018 is Rs. 10/-.

Purchase of mutual fund units:

The Purchase Price of the Units on an ongoing basis will be same as Applicable NAV.

Purchase Price = Applicable NAV

In the above example, purchase is done on April 01, 2018, when the Applicable NAV = Rs. 10/-
Therefore, Purchase Price = Rs. 10/-

As per existing Regulations, no entry load is charged with respect to applications for purchase / additional purchase of mutual funds units.

Redemption/Re-purchase of mutual fund units

The Redemption Price of the Units will be calculated on the basis of the Applicable NAV subject to prevailing Exit Load, if any. In case of redemption, the amount payable to the investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)

Say, in the above example the exit load applicable is:

- a. For exit on or before 12 months from the date of allotment – 1.00%
- b. For exit after 12 months from the date of allotment – Nil.

Scenario 1: Redemption is done during applicability of exit load

In case the investor requests for redemption on or before 12 months i.e. on or before March 31, 2019; say December 1, 2018, when the NAV of the scheme is Rs. 12/- and the exit load applicable is 1%, so the Redemption amount payable to investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)
= Rs. 12 * (1-1%) = Rs. 11.988/-

Scenario 2: Redemption is done when the exit load is NIL

In case the investor requests for redemption after 12 months i.e. after March 31, 2019; say April 1, 2019, when the NAV of the scheme is Rs. 12/- and the exit load applicable is NIL, so the Redemption amount payable to investor shall be calculated as follows:

Redemption Price = Applicable NAV * (1 - Exit Load)
= Rs. 12 * (1-0) = Rs. 12/-

The aforesaid example does not take into consideration any applicable statutory levies or taxes. Accordingly, the redemption amount payable to investor shall further reduce to the extent of applicable statutory levies or taxes.

Note: The aforesaid disclosure has been made pursuant to SEBI circular no. SEBI/HO/IMD/DF2/CIR/P/2018/92 dated June 05, 2018.
