I. INTRODUCTION

A. RISK FACTORS

1. STANDARD RISK FACTORS

- i. Mutual Funds and securities investments are subject to market risks such as trading volumes, settlement risk, liquidity risk, and default risk including the possible loss of principal and there is no assurance or guarantee that the objectives of the Scheme will be achieved
- ii. As the price / value / interest rate of the securities in which the scheme invests fluctuates, the value of your investment in the Scheme may go up or down depending on the factors and forces affecting the capital markets.
- iii. Past performance of the Sponsor/AMC/Mutual Fund does not guarantee future performance of the Scheme.
- iv. TRUSTMF Liquid Fund is only the name of the Scheme and does not in any manner indicate either the quality of the Scheme, or its future prospects and returns.
- v. The Sponsor is not responsible or liable for any loss resulting from the operation of the Scheme beyond initial contribution of Rs.1 lakh towards the setting up of the Mutual Fund and such other accretions and additions to the corpus.
- vi. This scheme is not a guaranteed or assured return scheme.
- vii. The Mutual Fund is not guaranteeing or assuring any payout under IDCW option. The Mutual Fund is also not assuring that it will make periodical distributions, though it has every intention of doing so. All distributions under IDCW option are subject to the availability of distributable surplus of the scheme

2. SCHEME SPECIFIC RISK FACTORS

Different types of securities in which the Scheme would invest as given in the Scheme Information Document carry different levels and types of risk. Accordingly, the Scheme's risk may increase or decrease depending upon its investment pattern.

Risks associated with investing in debt and/or Money Market Securities:

The following are the risks associated with an investment in Debt and Money Market securities:

Interest Rate Risk: As with all debt securities, changes in interest rates may affect the Scheme's Net Asset Value as the prices of securities generally increase as interest rates decline and generally decrease as interest rates rise. Prices of long-term securities generally fluctuate more in response to interest rate changes than do short-term securities. Indian debt markets can be volatile leading to the possibility of price movements up or down in fixed income securities and thereby to possible movements in the NAV.

Re-investment Risk: Investments in fixed income securities may carry re-investment risk as interest rates prevailing on the interest or maturity due dates may differ from the original coupon of the bond. Consequently, the proceeds may get invested at a lower rate.

Spread Risk: Yield Spreads between fixed income securities might change. Example: Corporate Bonds are exposed to the risk of widening of the spread between corporate bonds and gilts. Prices of corporate bonds tend to fall if this spread widens which might adversely affect the NAV of the scheme. Similarly, in case of floating rate securities, where the coupon is expressed in terms of a spread or mark up over the benchmark rate, widening of the spread results in a fall in the value of such securities.

Liquidity Risk: This risk pertains to how saleable a security is in the market or the ease at which a security can be sold at or close to its true value. Trading volumes, settlement periods and transfer procedures may restrict the liquidity of some of the investments. The primary measure of liquidity risk is the spread between the bid price and the offer price quoted by a dealer. The liquidity of debt securities may change, depending on market conditions. At the time of selling the security, the security can become less liquid (wider spread) or illiquid, leading to a loss in the value of the portfolio. Securities that are unlisted generally carry a higher liquidity risk compared to listed securities.

Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring mark to market losses and losses when the security is finally sold.

Liquidity risk is greater for thinly traded securities, lower-rated bonds, bonds that were part of a smaller issue, bonds that have recently had their credit rating downgraded or bonds sold by an infrequent issuer that may be relatively illiquid. Bonds are generally the most liquid during the period right after issuance when the bond typically has the highest trading volume.

Credit Risk/Default Risk: Credit risk is the risk that the issuer of a debenture/ bond or a money market instrument may default on interest and /or principal payment obligations and/or on violation of covenant(s) and/or delay in scheduled payment(s). Even when there is no default, the price of a security may change with expected changes in the credit rating of the issuer.

Government Security is a sovereign security and the default risk is considered to be the least. Corporate bonds carry a higher credit risk than Government Securities and among corporate bonds, there are different levels of safety. Credit risks of most issuers of debt securities are rated by independent and professionally run rating agencies. Ratings of Credit issued by these agencies typically range from "AAA" (read as "Triple-A" denoting "Highest Safety") to "D" (denoting "Default"). A bond rated higher by a particular rating agency is safer than a bond rated lower by the same rating agency.

Counterparty Risk: This is the risk of failure of counterparty to the transaction to deliver securities against consideration received or to pay consideration against securities delivered, in full or in part or as per the agreed specification. There could be losses to the Scheme in case of counterparty default.

Settlement Risk: Different segments of the Indian financial markets have different settlement periods and such periods may be extended significantly by unforeseen circumstances. The inability of the Scheme to make purchases in intended securities due to settlement problems could cause the Scheme to miss certain investment opportunities. Fixed income securities run the risk of settlement which can adversely affect the ability of the fund house to swiftly execute trading strategies which can lead to adverse movements in NAV.

Duration Risk: The modified duration of a bond is a measure of its price sensitivity to interest rates movements, based on the average time to maturity of its interest and principal cash flows.

Bond portfolio managers increase average duration when they expect rates to decline, to get the most benefit, and decrease average duration when they expect rates to rise, to minimize the negative impact. If rates move in a direction contrary to their expectations, they lose.

Inflation Risk: Inflation causes tomorrow's currency to be worth less than today's; in other words, it reduces the purchasing power of a bond investor's future interest payments and principal, collectively known as "cash flows." Inflation also leads to higher interest rates, which in turn leads to lower bond prices. Inflation-indexed securities such as Treasury Inflation Protection Securities (TIPS) are structured to remove inflation risk.

Selection Risk: This is the risk that a security chosen will underperform the market for reasons that cannot be anticipated.

Timing Risk: It is the risk of transacting at a price based on erroneous future price predictions resulting in losses. Timing risk explains the potential for missing out on beneficial movements in price due to an error in timing. This could lead to purchasing too high or selling too low.

Call Risk: Some corporate, municipal and agency bonds have a "call provision" entitling their issuers to redeem them at a specified price on a date prior to maturity. Declining interest rates may accelerate the redemption of a callable bond, causing an investor's principal to be returned sooner than expected. In that scenario, investors have to reinvest the principal at lower interest rates. (See also Reinvestment risk.)

Concentration Risk: This is the risk arising from overexposure to a few securities/issuers/sectors. The Scheme intends to invest substantially in Tri – Party Repo. For risks relating to investments in Tri-Party Repo, please refer to the section on 'Risks associated with investing in the Securities Segment and Tri-party Repo trade settlement' herein below in this document.

Legislative Risk: This is the risk that a change in the tax code could affect the value of taxable or tax-exempt interest income.

Basis Risk (Interest - rate movement): During the life of a floating rate security or a swap, the underlying benchmark index may become less active and may not capture the actual movement in interest rates or at times the benchmark may cease to exist. These types of events may result in a loss of value in the portfolio.

Other Risk: In the case of downward movement of interest rates, floating-rate debt instruments will give a lower return than fixed rate debt instruments.

Securities Lending: Engaging in securities lending is subject to risks related to fluctuations in collateral value and settlement/liquidity and counterparty risks. The risks in lending portfolio securities, as with other extensions of credit, consist of the failure of another party, in this case, the approved intermediary, to comply with the terms of the agreement entered into between the lender of securities i.e. the Scheme and the approved intermediary. Such failure to comply can result in the possible loss of rights in the collateral put up by the borrower of the securities, the inability of the approved intermediary to return the securities deposited by the lender and the possible loss of any corporate benefits accruing to the lender from the securities deposited with the approved intermediary. The Mutual Fund may not be able to sell such lent securities and this can lead to temporary illiquidity.

Short-selling of Securities: Purchasing a security entails the risk of the security price going down. Short selling of securities (i.e. a sale of securities without owning them) entails the risk of the security price going up thereby decreasing the profitability of the short position. Short selling is subject to risks related to fluctuations in market price, and settlement/liquidity risks. If required by the Regulations, short selling may entail margin money to be deposited with the clearing house and daily mark to market of the prices and margins. This may impact fund pricing and may induce liquidity risks if the fund is not able to provide adequate margins to the clearinghouse. Failure to meet margin requirements may result in penalties being imposed by the exchanges and clearinghouse.

Risks associated with investing in Unrated Securities: Investing in unrated securities is riskier compared to investing in rated instruments due to the non-availability of third party assessment on the repaying capability of the issuer. In addition, unrated securities are more likely to react to general developments affecting the market than rated securities, which react primarily to movements in the general level of interest rates. Unrated securities also tend to be more sensitive to economic conditions than higher-rated securities.

Trading through mutual fund trading platforms of BSE and/or NSE: In respect of a transaction in Units of the Scheme through BSE and/or NSE, allotment and redemption of Units on any Business Day will depend upon the order processing/settlement by BSE and/or NSE and their respective clearing corporations on which the Mutual Fund has no control.

Risks factors associated with investments in repo transactions in corporate bonds:

In repo transactions, also known as a repo or sale repurchase agreement, securities are sold with the seller agreeing to buy them back at later date. The repurchase price should be greater than the original sale price, the difference effectively representing interest. A repo is economically similar to a secured loan, with the buyer receiving corporate debt securities as collateral to protect against default. The Scheme may invest in repo of corporate debt securities which are subject to the following risks:

Counterparty Risk related to the repo: This refers to the inability of the seller to meet the obligation to buy back securities at the contracted price on the contracted date. The Investment Manager will endeavour to manage counterparty risk by dealing only with counterparties, having strong credit profiles, approved by our credit risk analysis team. The exposure to each counterparty will be within the overall approved credit limits. Also, the counterparty risk is to an extent mitigated by taking collateral equivalent in value to the transaction after knocking off a minimum haircut on the intrinsic value of the collateral. In the event of default by the repo counterparty, the scheme shall have recourse to the corporate debt securities.

Collateral Risk: Collateral risk arises when the market value of the securities is inadequate to meet the repo obligations. This risk is mitigated by restricting participation in repo transactions with collateral bearing a minimum rating as prescribed by the regulators (currently AA or equivalent and above rated money market and corporate debt securities). Any rating downgrade will tantamount to either an early termination of the repo agreement or a call for a fresh margin to meet the minimum haircut requirement. In addition, the Investment manager may apply a higher haircut on the underlying security than mentioned above to adjust for the illiquidity and interest rate risk on the underlying instrument. The adequacy of the collateral will be monitored on a daily basis by considering the daily market value & applying the prescribed haircut. In the event of a shortfall in the collateral, the counterparty shall be asked to replenish the same. If the counterparty is not able to top-up either in form of cash/collateral, it shall tantamount to early termination of the repo agreement.

Settlement Risk: Corporate Bond Repo shall be settled between two counterparties in the OTC segment unlike in the case of Government securities repo transactions where CCIL stands as central counterparty on all transactions which neutralizes the settlement risk. However, the settlement risk pertaining to CDRs shall be mitigated through Delivery versus Payment (DvP) mechanism which is followed by all clearing members.

Risks associated with investing in Tri-party Repo trade settlement:

The mutual fund is a member of the securities segment and Tri-party Repo trade settlement of the Clearing Corporation of India (CCIL). All transactions of the mutual fund in government securities and in Tri-party Repo trades are settled centrally through the infrastructure and settlement systems provided by CCIL; thus reducing the settlement and counterparty risks considerably for transactions in the said segments. The members are required to contribute an amount as communicated by CCIL from time to time to the default fund maintained by CCIL as a part of the default waterfall (a loss mitigating measure of CCIL in case of default by any member in settling transactions routed through CCIL). CCIL shall maintain two separate Default Funds in respect of its Securities Segment, one with a view to meet losses arising out of any default by its members from outright and repo trades and the other for meeting losses arising out of any default by its members from Triparty Repo trades. The mutual fund is exposed to the extent of its contribution to the default fund of CCIL at any given point in time i.e. in the event that the default waterfall is triggered and the contribution of the mutual fund is called upon to absorb settlement/default losses of another member by CCIL, the scheme may lose an amount equivalent to its contribution to the default fund.

Performance Risk: The Scheme's performance can decrease or increase, depending on a variety of factors, which may affect the values and income generated by the Scheme's portfolio of securities. The returns of the Scheme's investments are based on the current yields of the securities, which may be affected generally by factors affecting markets such as price and volume, interest rates, currency exchange rates, changes in government and Reserve Bank of India policy and taxation, political, economic or other developments. Investors should understand that the investment pattern indicated for the Scheme, in line with prevailing market conditions, is only a hypothetical example as all investments involve risk and there can be no assurance that the Scheme's investment objective will be attained nor will the Scheme be in a position to maintain the model percentage of investment pattern/composition particularly under exceptional circumstances so that the interest of the unit holders are protected. A change in the prevailing rates of interest is likely to affect the value of the Scheme's investments and thus the value of the Scheme's Units. The value of money market instruments held by the Scheme generally will vary inversely with the changes in prevailing interest rates.

Changes in Government Regulations: The businesses in which companies operate are exposed to a range of government regulations, related to tax benefits, liberalization, provision of infrastructure and the like. Changes in such regulations may affect the prospects of companies.

Risks associated with Segregated Portfolio

Liquidity risk

1. Investor holding units of a segregated portfolio may not able to liquidate their holding till the time recovery of money from the issuer.
2. Listing of units of a segregated portfolio in a recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further, the trading price of units on the stock market may be significantly lower than the prevailing NAV.

Credit risk

1. Security comprises of a segregated portfolio may not realise any value.

3. OTHER SCHEME SPECIFIC RISK FACTORS

- a. The liquidity of the Scheme's investments may be inherently restricted by trading volumes, settlement periods and transfer procedures. In the event of an inordinately large number of redemption requests, or of a re-structuring of the Scheme's investment portfolio, these periods may become significant. Please read the Sections of this Scheme Information Document entitled "Special Considerations" and "Right to Limit Redemptions" thereunder.
- b. Although, the objective of the Fund is to generate optimal returns, the objective may or may not be achieved. The investors may note that if the AMC/Investment Manager is not able to make the right decision regarding the timing of increasing exposure in debt securities in times of falling equity market, it may result in negative returns. Given the nature of the scheme, the portfolio turnover ratio may be on the higher side commensurate with the investment decisions and Asset Allocation of the Scheme. At times, such churning of the portfolio may lead to losses due to subsequent negative or unfavourable market movements.
- c. Credit And Rating Downgrade Risk, Prepayment And Foreclosures Risk for Senior PTC Series, Prepayment And Foreclosures Risk for Senior PTC Series, Servicing Agent Risk, Co-mingling Risk, and Bankruptcy of the Seller.
- d. The NAV of the scheme to the extent invested in Debt securities are likely to be affected by changes in the prevailing rates of interest and are likely to affect the value of the Scheme's holdings and thus the value of the Scheme's Units.
- e. The AMC may, considering the overall level of risk of the portfolio, invest in lower-rated/unrated securities offering higher yields. This may increase the risk of the portfolio.
- f. Securities which are not quoted on the stock exchanges are inherently illiquid in nature and carry a larger amount of liquidity risk, in comparison to securities that are listed on the exchanges or offer other exit options to the investor, including a put option. The AMC may choose to invest in unlisted securities that offer attractive yields. This may increase the risk of the portfolio.
- g. While securities that are listed on the stock exchange carry lower liquidity risk, the ability to sell these investments is limited by the overall trading volume on the stock exchanges. Money market securities, while fairly liquid, lack a well-developed secondary market, which may restrict the selling ability of the Scheme and may lead to the Scheme incurring losses till the security is finally sold.
- h. Investment decisions made by the AMC may not always be profitable, even though it is intended to generate capital appreciation and maximize the returns by actively investing.
- i. The tax benefits available under the scheme are as available under the present taxation laws and are available only to certain specified categories of investors and that is subject to fulfillment of the relevant conditions. The information given is included for general purposes only and is based on advice that the AMC has received regarding the law and the practice that is currently in force in India and the investors and the Unitholders should be aware that the relevant fiscal rules and their interpretation may change.

As is the case with any investment, there can be no guarantee that the tax position or the proposed tax position prevailing at the time of investment in the Scheme will endure indefinitely. In view of the individual nature of tax consequences, each Investor/Unitholder is advised to consult his/her own professional tax advisor.

Risk associated with investing in Derivatives

- **Valuation Risk**

The risk in valuing the debt & equity derivative products due to inadequate trading data with good volumes. Derivatives with longer duration would have higher risk vis-à-vis the shorter duration derivatives.

- **Mark to Market Risk**

The day-to-day potential for an investor to experience losses from fluctuations in underlying stock prices and derivatives prices.

- **Systematic Risk**

The risks inherent in the capital market due to macro-economic factors like inflation, GDP and global events.

- **Liquidity Risk**

The risks stemming from the lack of availability of derivatives products across different maturities and with various risk appetite.

- **Implied Volatility**

The estimated volatility in an underlying security's price and derivative price.

- **Interest Rate Risk**

The risk stemming from the movement of Interest rates in an adverse direction. As with all the debt securities, changes in the interest rates will affect the valuation of the portfolios.

- **Counterparty Risk (Default Risk)**

Default risk is the risk that losses will be incurred due to the default by the counterparty for over the counter derivatives.

- **System Risk**

The risk arising due to the failure of operational processes followed by the exchanges and OTC participants for the derivatives trading.

Risk attached with the use of derivatives:

As and when the Scheme trades in the derivatives market there are risk factors and issues concerning the use of derivatives that investors should understand. Derivative products are specialized instruments that require investment techniques and risk analysis different from those associated with stocks and bonds. The use of a derivative requires an understanding not only of the underlying instrument but of the derivative itself. Derivatives require the maintenance of adequate controls to monitor the transactions entered into, the ability to assess the risk that a derivative adds to the portfolio and the ability to forecast price or interest rate movements correctly. There is a possibility that a loss may be sustained by the portfolio as a result of the failure of another party (usually referred to as the "counterparty") to comply with the terms of the derivatives contract. Other risks in using derivatives include the risk of mispricing or improper valuation of derivatives and the inability of derivatives to correlate perfectly with underlying assets, rates and indices.

Derivative products are leveraged instruments and can provide disproportionate gains as well as disproportionate losses to the investor. Execution of such strategies depends upon the ability of the fund manager to identify such opportunities. Identification and execution of the strategies to be pursued by the fund manager involve uncertainty and the decision of the fund manager may not always be profitable. No assurance can be given that the fund manager will be able to identify or execute such strategies.

The risks associated with the use of derivatives are different from or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

The risk associated with the use of derivatives would be the same for imperfect hedging.

B. REQUIREMENT OF MINIMUM INVESTORS IN THE SCHEME

The Scheme/Plan shall have a minimum of 20 investors and no single investor shall account for more than 25% of the corpus of the Scheme/ Plan(s). However, if such limit is breached during the NFO of the Scheme, the Fund will endeavour to ensure that within a period of three months or the end of the succeeding calendar quarter from the close of the NFO of the Scheme, whichever is earlier, the Scheme complies with these two conditions. In case the Scheme / Plan(s) does not have a minimum of 20 investors in the stipulated period, the provisions of Regulation 39(2)(c) of the SEBI (MF) Regulations would become applicable automatically without any reference from SEBI and accordingly, the Scheme / Plan(s) shall be wound up and the units would be redeemed at applicable NAV. The two conditions mentioned above shall also be complied with within each subsequent calendar quarter thereafter, on an average basis, as specified by SEBI. If there is a breach of the 25% limit by any investor over the quarter, a rebalancing period of one month would be allowed and thereafter the investor who is in breach of the rule shall be given a 15 day notice to redeem his exposure over the 25% limit. Failure on the part of the said investor to redeem his exposure over the 25 % limit within the aforesaid 15 days would lead to automatic redemption by the Mutual Fund on the applicable Net Asset Value on the 15th day of the notice period. The Fund shall adhere to the requirements prescribed by SEBI from time to time in this regard.

C. REQUIREMENT OF MINIMUM AVERAGE ASSETS UNDER MANAGEMENT:

The Scheme shall maintain an average AUM of Rs. 20 crore on a half-yearly rolling basis. In case, the average AUM falls below Rs. 20 crore, the AMC shall scale up the AUM of such Scheme within a period of six months so as to maintain the average AUM of Rs. 20 crore on half-yearly rolling basis, failing which the Scheme shall be wound up in accordance with the provisions of Regulation 39(2)(c) of SEBI (Mutual Funds) Regulations, 1996 as amended from time to time.

D. SPECIAL CONSIDERATIONS:

Redemption by the Unit holder either due to a change in the fundamental attributes of the Scheme or due to any other reasons that may entail tax consequences. The Trustee, AMC, Mutual Fund, their directors or their employees shall not be liable for any such tax consequences that may arise.

Subject to SEBI (Mutual Funds) Regulations, 1996 in the event of substantial investment by the Sponsors and their associates directly or indirectly in the Scheme of the Mutual Fund, Redemption of Units by these entities may have an adverse impact on the performance of the Scheme because of the timing of any such Redemptions and this may also impact the ability of other Unit holders to redeem their Units.

The Scheme has not been registered in any jurisdiction. The Scheme may however in future be registered in any jurisdiction, as and when the Trustee/AMC desires. The distribution of this SID in certain jurisdictions may be restricted or totally prohibited due to registration or other requirements and accordingly, persons who come in possession of this SID are required to inform themselves about and observe any such restrictions and/ or legal, compliance requirements with respect to their eligibility for investment in the Units of the Scheme. The AMC and/ or its Registrars & Transfer Agent (RTA) reserve the right to disclose/share the Unit holder's details of folio(s) and transaction details thereunder with the following third parties:

- a) RTA, Banks and/or authorised external third parties who are involved in transaction processing, dispatching etc., of the Unitholder's investment in the Scheme;
- b) Distributors or sub-brokers through whom the applications are received for the Scheme;
- c) Any other organizations for compliance with any legal or regulatory requirements or to verify the identity of the Unitholders for complying with anti-money laundering requirements.

The Product labelling mandated by SEBI is to provide investors with an easy understanding of the risk involved in the kind of product/ scheme they are investing in to meet their financial goals. The Riskometer categorizes the schemes of Fund under different levels of risk based on the respective scheme's investment objective, asset allocation pattern, investment strategy and typical investment time horizon of investors. Therefore, the schemes falling under the same level of risk in the Riskometer may not be similar in nature. Investors are advised before investing to evaluate a scheme not only on the basis of the Product labelling (including the Riskometer) but also on other quantitative and qualitative factors such as performance, portfolio, fund managers, asset manager, etc. and shall also consult their financial advisers, if they are unsure about the suitability of the scheme before investing. AMC shall monitor and review the Riskometer requirements in line with the requirements specified by SEBI from time to time.

Mutual funds investments are subject to market risks and the Investors should review/study this SID, the SAI and the addenda thereto issued from time to time carefully in its entirety before investing and should not construe the contents hereof or regard the summaries contained herein as advice relating to legal, taxation or financial/investment matters. There can be no assurance or guarantee that the Scheme objectives will be achieved and the investment decisions made by the AMC may not always be profitable.

In terms of the Prevention of Money Laundering Act, 2002, the Rules issued thereunder and the guidelines/circulars issued by SEBI regarding the Anti Money Laundering (AML Laws), all intermediaries, including Mutual Funds, have to formulate and implement a client identification i.e. Know Your Customer programme, verify and maintain the record of identity and address(es) of investors.

The need to Know Your Customer (KYC) is vital for the prevention of money laundering. The Trustee/AMC may seek information or obtain and retain documentation used to establish identity. It may re-verify identity and obtain any missing or additional information for this purpose. The Trustee/AMC shall have absolute discretion to reject any application or prevent further transactions by a Unit holder, if after due diligence, the Investor/Unit holder/a person making the payment on behalf of the Investor does not fulfill the requirements of the Know Your Customer (KYC).

If after due diligence the Trustee/AMC has reason to believe that any transaction is suspicious in nature as regards money laundering, the AMC shall report such transactions to competent authorities under PMLA and rules/guidelines issued thereunder by SEBI/RBI, furnish any

such information in connection therewith to such authorities and take any other actions as may be required for the purposes of fulfilling its obligations under PMLA and rules/guidelines issued thereunder without obtaining prior approval of the Unitholder/any other person. In this connection the Trustee/AMC reserves the right to reject any such application at its discretion.

1. Income Distribution

The Mutual Fund is not assuring or guaranteeing that it will be able to make regular periodical income distributions to its Unitholders, though it has every intention to manage the portfolio so as to make periodical income distributions. Income distributions will be dependent on the availability of distributable and the returns achieved by the Asset Management Company through active management of the portfolio. Periodical income distributions may therefore vary from period to period, based on the investment results of the portfolio.

2. Right to limit Purchase of units and/or Right to limit Redemption of units

The Trustee and AMC may, in the general interest of the Unit holders of the Scheme under this Scheme Information Document and keeping in view of the unforeseen circumstances / unusual market conditions, limit the total number of units that may be redeemed on any Working Day for redemption requests of more than Rs. 2 Lakhs per folio at a scheme level in any Scheme. In line with the para 1.12 of SEBI Master Circular, the following conditions would be applicable.

- a. Restriction may be imposed when there are circumstances leading to a systemic crisis or event that severely constricts market liquidity or the efficient functioning of markets such as:
 - i. Liquidity issues - when the market at large becomes illiquid and affecting almost all securities.
 - ii. Market failures, exchange closures - when markets are affected by unexpected events which impact the functioning of exchanges or the regular course of transactions. Such unexpected events could also be related to political, economic, military, monetary or other emergencies.
 - iii. Operational issues – when exceptional circumstances are caused by force majeure, unpredictable operational problems and technical failures (e.g. a blackout).
- b. Restriction on redemption may be imposed for a specified period of time not exceeding 10 working days in any 90 days period. When restriction on redemption is imposed, the following procedure shall be applied:
 - i. No redemption requests up to Rs. 2 Lakhs shall be subject to such restriction.
 - ii. Where redemption requests are above Rs. 2 Lakhs, AMCs shall redeem the first Rs. 2 Lakhs without such restriction and remaining part over and above Rs. 2 Lakhs shall be subject to such restriction.

However, suspension or restriction of redemption under any scheme of the Mutual Fund shall be made applicable only after the approval from the Board of Directors of the Asset Management Company and the Trustee Company. The approval from the AMC Board and the Trustees giving details of circumstances and justification for the proposed action shall also be informed to SEBI immediately.

Segregation of Portfolio

Creation of a segregated portfolio shall be subject to guidelines specified by SEBI from time to time and includes the following:

- 1) Segregated portfolio may be created, in case of a credit event at issuer level i.e. downgrade in credit rating by a SEBI registered Credit Rating Agency (CRA), as under:
 - a) Downgrade of a debt or money market instrument to 'below investment grade', or
 - b) Subsequent downgrades of the said instruments from 'below investment grade', or
 - c) Similar such downgrades of a loan rating
- 2) In case of difference in rating by multiple CRAs, the most conservative rating shall be considered. The creation of a segregated portfolio shall be based on issuer level credit events as mentioned above and implemented at the ISIN level.
- 3) Segregated portfolio can also be created for special feature bonds in case if the instrument is to be written off or converted to equity pursuant to any proposal in line with Para 4.4.4. related to 'Provisions for Segregation of Portfolio in SID of scheme having investment in instrument with special features' of the SEBI Master Circular.
- 4) Creation of segregated portfolio is optional and is at the discretion of TRUST Asset Management Private Limited ("AMC")
- 5) AMC has a written down policy on the creation of a segregated portfolio which is approved by the Trustees.

Process for Creation of Segregated Portfolio

- 1) AMC shall decide on the creation of a segregated portfolio on the day of a credit event. Once AMC decides to segregate portfolio, it shall:
 - a) seek approval of trustees prior to the creation of the segregated portfolio.
 - b) immediately issue a press release disclosing its intention to segregate such debt and money market instrument and its impact on the investors. TRUST Mutual Fund will also disclose that the segregation shall be subject to Trustee approval. Additionally, the said press release will be prominently disclosed on the website of the AMC.
 - c) ensure that till the time the trustee approval is received, which in no case shall exceed 1 business day from the day of the credit event, the subscription and redemption in the scheme will be suspended for processing with respect to the creation of units and payment on redemptions.
- 2) Once Trustee approval is received by the AMC:
 - a) Segregated portfolio will be effective from the day of the credit event.
 - b) AMC shall issue a press release immediately with all relevant information pertaining to the segregated portfolio. The said information will also be submitted to SEBI.
 - c) An e-mail or SMS will be sent to all unit holders of the concerned scheme.
 - d) The NAV of both segregated and main portfolios will be disclosed from the day of the credit event.
 - e) All existing investors in the scheme as on the day of the credit event will be allotted an equal number of units in the segregated portfolio as held in the main portfolio.
 - f) No redemption and subscription will be allowed in the segregated portfolio.
 - g) AMC should enable listing of units of the segregated portfolio on the recognized stock exchange within 10 working days of the creation of the segregated portfolio and also enable the transfer of such units on receipt of transfer requests.

- 3) If the trustees do not approve the proposal to the segregate portfolio, AMC will issue a press release immediately informing investors of the same.

Valuation and Processing of Subscriptions and Redemptions

1. Notwithstanding the decision to segregate the debt and money market instrument, the valuation should take into account the credit event and the portfolio shall be valued based on the principles of fair valuation (i.e. realizable value of the assets) in terms of the relevant provisions of SEBI (Mutual Funds) Regulations, 1996 and Circular(s) issued thereunder.
2. All subscription and redemption requests for which NAV of the day of the credit event or subsequent day is applicable will be processed as under:
 - i. Upon trustees' approval to create a segregated portfolio -
 - Investors redeeming their units will get redemption proceeds based on the NAV of the main portfolio and will continue to hold the units of segregated portfolio.
 - Investors subscribing to the scheme will be allotted units only in the main portfolio based on its NAV.
 - ii. In case trustees do not approve the proposal of a segregated portfolio, subscription and redemption applications will be processed based on the NAV of the total portfolio.

Disclosures

In order to enable the existing as well as the prospective investors to make an informed decision, the following shall be adhered to:

A statement of holding indicating the units held by the investors in the segregated portfolio along with the NAV of both segregated portfolio and the main portfolio as on the day of the credit event shall be communicated to the investors within 5 working days of the creation of the segregated portfolio.

- 1) Adequate disclosure of the segregated portfolio shall appear in all scheme related documents, in monthly and half-yearly portfolio disclosures and the annual report of the mutual fund and the scheme.
- 2) The Net Asset Value (NAV) of the segregated portfolio shall be declared on a daily basis.
- 3) The information regarding the number of segregated portfolios created in a scheme shall appear prominently under the name of the scheme at all relevant places such as SID, KIM-cum-Application Form, advertisement, AMC and AMFI websites, etc.
- 4) The scheme performance required to be disclosed at various places shall include the impact of the creation of the segregated portfolio. The scheme performance should clearly reflect the fall in NAV to the extent of the portfolio segregated due to the credit event and the said fall in NAV along with recovery/ies, if any, shall be disclosed as a footnote to the scheme performance.
- 5) The disclosures mentioned in points (4) and (5) above regarding the segregated portfolio shall be carried out for a period of at least 3 years after the investments in the segregated portfolio are fully recovered/ written-off.
- 6) The investors of the segregated portfolio shall be duly informed of the recovery proceedings of the investments of the segregated portfolio. Status update may be provided to the investors at the time of recovery and also at the time of writing-off of the segregated securities.

Monitoring by Trustees

In order to ensure timely recovery of investments of the segregated portfolio, trustees shall ensure that:

- The AMC puts in sincere efforts to recover the investments of the segregated portfolio.
- Upon recovery of money, whether partial or full, it shall be immediately distributed to the investors in proportion to their holding in the segregated portfolio. Any recovery of the amount of the security in the segregated portfolio even after the write off shall be distributed to the investors of the segregated portfolio.
- An Action Taken Report (ATR) on the efforts made by the AMC to recover the investments of the segregated portfolio shall be placed in every Trustee meeting till the investments are fully recovered/written-off.
- Trustees will monitor the compliance of the SEBI Circular in respect of creation of segregated portfolio and disclosure in this respect shall be made in Half-Yearly Trustee reports filed with SEBI.

In order to avoid misuse of the segregated portfolio, Trustees shall ensure to have a mechanism in place to negatively impact the performance of Fund Managers, Chief Investment Officers (CIOs), etc. involved in the investment process of securities under the segregated portfolio. The new mechanism shall mirror the existing mechanism for performance incentives of the AMC, including the clawback of such amount to the segregated portfolio of the Scheme(s).

TER for the Segregated Portfolio

- 1) AMC will not charge investment and advisory fees on the segregated portfolio. However, TER (excluding the investment and advisory fees) can be charged, on a pro-rata basis only upon recovery of the investments in the segregated portfolio.
- 2) The TER so levied shall not exceed the simple average of such expenses (excluding the investment and advisory fees) charged on daily basis on the main portfolio (in % terms) during the period for which the segregated portfolio was in existence.
- 3) The legal charges related to the recovery of the investments of the segregated portfolio may be charged to the segregated portfolio in proportion to the amount of recovery. However, the same shall be within the maximum TER limit as applicable to the main portfolio. The legal charges in excess of the TER limits, if any, shall be borne by the AMC.
- 4) The costs related to the segregated portfolio shall in no case be charged to the main portfolio.

Definitions/Explanations

- 1) The term 'segregated portfolio' means a portfolio, comprising of debt or money market instrument affected by a credit event that has been segregated in a mutual fund scheme.
- 2) The term 'main portfolio' means the scheme portfolio excluding the segregated portfolio.
- 3) The term 'total portfolio' means the scheme portfolio including the securities affected by the credit event.

Risks associated with segregated portfolio:**Liquidity risk**

- Investor holding units of the segregated portfolio may not be able to liquidate their holding till the time recovery of money from the issuer.
- Listing of units of the segregated portfolio in a recognised stock exchange does not necessarily guarantee their liquidity. There may not be active trading of units in the stock market. Further, the trading price of units on the stock market may be significantly lower than the prevailing NAV.

Credit risk

- Security comprising of a segregated portfolio may not realise any value.

Illustration of Segregated Portfolio

An illustration in tabular form explains how a security affected by a credit event will be segregated and its impact on investors. Whether the distressed security is held in the original portfolio or the segregated portfolio, the value of the investors' holdings will remain the same on the date of the credit event. Over time, the NAVs of the portfolios are subject to change.

Key Assumptions: We have assumed a scheme holds 4 securities (A1, A2, A3 & A4) in its portfolio. It has two investors with 5,000 units. (Investor 1 - 3,000 units, Investor 2 - 2,000 units).

Total Portfolio Value of ₹ 40 Lakhs (Each security invested is valued at ₹ 10 Lakh).

Current NAV: $40,00,000/5,000 = ₹ 800$ per unit. Suppose Security A4 is downgraded to below investment grade and consequently the value of the security falls from ₹ 10,00,000 to ₹ 2,00,000 and the AMC decides to segregate the security into a new portfolio. Investors will be allotted the same number of units in the segregated portfolio as they hold in the main portfolio. So, Investor 1 will get 3,000 Units and Investor 2 will get 2,000 units in the segregated portfolio.

With segregation, the portfolio value is ₹ 32,00,000 (Now A1, A2 & A3 Securities worth ₹ 30 Lakh and Security A4, which has fallen from ₹ 10,00,000 to ₹ 2,00,000).

Particulars	Main Portfolio (Security A1, A2 & A3)	Segregated Portfolio (Security A4)
Net Assets	₹ 30,00,000	₹ 2,00,000
Number of Units	5,000	5,000
NAV Per unit	$₹ 30,00,000/5,000 = ₹ 600$	$₹ 2,00,000/5,000 = ₹ 40$

With Respect to Investors:

Particulars	Investor 1	Investor 2
Units held in the main Portfolio	3,000	2,000
NAV of the main Portfolio	₹ 600 per unit	₹ 600 per unit
Value of Holding in main Portfolio (X) in ₹	18,00,000	12,00,000
Units held in Segregated Portfolio	3,000	2,000
NAV of Segregated Portfolio	₹ 40	₹ 40
Value of Holding in Segregated Portfolio (Y) in ₹	1,20,000	80,000
Total Value of Holding (X) + (Y) in ₹	19,20,000	12,80,000

In case the portfolio is not segregated, the Total Portfolio after marking down the value of security A4 would be:

Net Assets of the Portfolio ₹ 32,00,000	No. of Units 5,000	NAV per unit = $32,00,000 / 5,000 = ₹ 640$
Particulars	Investor 1	Investor 2
Units held in the Original Portfolio (No. of units)	3,000	2,000
NAV of the Main Portfolio	₹ 640 per unit	₹ 640 per unit
Value of Holding in Main Portfolio (X) in ₹	19,20,000	12,80,000

Investors may note the essential difference between a segregated portfolio and non-segregated portfolio as follows:

- Where the portfolio is not segregated, the transactions will continue to be processed at NAV based prices. There will be no change in the number of units remaining outstanding
- Where the portfolio is segregated, equal number of units are created and allotted to reflect the holding for the portion of portfolio that is segregated
- Once the portfolio is segregated, the transactions will be processed at NAV based prices of main portfolio
- Since the portfolio is segregated for distressed security, the additional units that are allotted cannot be redeemed. The units will be listed on the recognised stock exchange to facilitate exit to unit holders
- Upon realisation of proceeds under the distressed security either in part or full, the proceeds will be paid accordingly. Based on the circumstances and developments, the AMC may decide to write off the residual value of the segregated portfolio.

The AMC / Mutual Fund shall adhere to such other requirements as may be prescribed by SEBI / AMFI in this regard.

For applicable regulatory investment limits, please refer to the paragraph "Investment Restrictions". Details of various derivative strategies/ examples of the use of derivatives have been provided under the section "Derivatives Strategy". The Fund Manager reserves the right to invest in such securities as may be permitted from time to time and which are in line with the investment objectives of the Scheme.

F. WHAT ARE THE INVESTMENT STRATEGIES?

The fund management team will endeavour to maintain consistent performance in the scheme by maintaining a balance between safety, liquidity and profitability aspects of various investments. The fund manager will try to achieve an optimal risk-return balance for management of the fixed income portfolios. The investments in debt instruments carry various risks like interest rate risk, liquidity risk, default risk, purchasing power risk etc. While they cannot be done away with, they can be minimized by diversification and effective use of hedging techniques.

The fund management team will take an active view of the interest rate movement by keeping a close watch on various parameters of the Indian economy, as well as developments in global markets.

Investment views/decisions will be taken based on the following parameters:

- i. Prevailing interest rate scenario
- ii. Quality of the security/ instrument (including the financial health of the issuer)
- iii. Maturity profile of the instrument
- iv. Liquidity of the security
- v. Growth prospects of the company/industry
- vi. Any other factors in the opinion of the fund management team

Risk Measurement /Control

Risk is an inherent part of the investment function. Effective risk management is critical to the fund management for achieving financial soundness. Investments by the Scheme shall be made as per the investment objectives of the Scheme and provisions of SEBI regulations. AMC has incorporated adequate safeguards to manage risk in the portfolio construction process. Risk control would involve managing risk in order to keep it in line with the investment objective of the Scheme. The AMC has systems that enable the fund manager to calculate various risk ratios, average duration etc. Investment Committee may from time to time define internal investment norms for the scheme.

The Fund Management proposes to use analytic risk management tools like VAR/convexity/modified duration for effective portfolio management.

Credit Evaluation Policy

The credit evaluation policy of the AMC entails the evaluation of credit fundamentals of each underlying exposure. Some of the major factors that could be evaluated are:

- a) Outlook on the sector
- b) Strength & Support of the Parent
- c) Quality of management
- d) Overall financial strength of the credit as determined by key financial ratios.

Ratings of recognized rating agencies are taken as a reference point in the credit evaluation process. Investments in bonds and debenture are made usually in instruments that have high investment-grade ratings by a recognized rating agency.

Portfolio Turnover:

The Scheme being an open-ended debt Scheme, it is expected that there would be a number of subscriptions and redemptions on a daily basis. Also, with the average maturity of the Scheme being low, the portfolio turnover ratio may be high. Further, in the debt market, trading opportunities may arise due to changes in system liquidity, interest rate policy announced by RBI, shifts in the yield curve, credit rating changes or any other factors. In the opinion of the fund manager, these opportunities can be played out to enhance the total return of the portfolio, which will increase portfolio turnover. There may be an increase in transaction cost such as brokerage paid, if trading is done frequently. However, the cost would be negligible as compared to the total expenses of the Scheme. Frequent trading may increase profits which will offset the increase in costs. The fund manager will endeavour to optimize portfolio turnover to maximize gains and minimize risks keeping in mind the cost associated with it. However, it is difficult to estimate with a reasonable measure of accuracy, the likely turnover in the portfolio of the Scheme. The Scheme has no specific target relating to portfolio turnover.

Investment Process:

For portfolio creation, the AMC will endeavour to follow the below-mentioned process:

1. Define the investment universe of issuers based on the parameters such as credit rating, amount outstanding, liquidity, ownership structure, rating outlook etc. in line with the scheme objectives
2. Create a model portfolio by selecting securities with a sectoral allocation that adequately represents the universe of underlying issuers. The issuers in the universe which are not part of the model portfolio will be termed as proxy issuers

The issuers in the universe which are not part of the model portfolio will be termed as proxy issuers. The Fund manager shall attempt to invest predominantly in line with the model portfolio and employ limited variance in terms of altering asset allocation, duration of the portfolio and issuers.

The securities will be selected based on factors such as liquidity, relative valuation, corporate spreads and term structure, in line with scheme objectives. The said investment approach is termed as Limited Active ( LimitedACTIV[®]) philosophy by the TRUST AMC.

An external agency may review the methodology and process, with backtesting, along with a periodic review of the process and portfolio.

Currently, CRISIL has been appointed to undertake such activities. The AMC reserves the right to change the investment process and the external agency from time to time.

Rating of the Fund:

This Scheme may get rated from a SEBI registered Rating Agency. The rating signifies quality of portfolio in which the fund manager intends to invest in. The AMC reserves the right to discontinue, modify the terms for the display / communications of the rating.

Overview of Debt Market in India

The Indian Debt market is facing major shift in the recent times. The substantial growth in Mutual Fund collections in the past few years have provided an easy route for the investors to channelize their savings into the debt market, which otherwise is largely dominated by Banks and other Institutional investors.

At present, issues of Central Government bonds, Corporate Debentures and PSU Bonds, dominate the Indian debt market. The new Securitised instruments are also very attractive in the primary market. Risk associated with securitized Debt or PTCs are credit risk, liquidity risk and price risk/interest rate risk. The other instruments available for investment are Commercial Papers, Certificate of Deposits, Government guaranteed bonds, etc.

Brief details about the instruments are given below as on September 30, 2023:

Instruments	Current Yield Range	Liquidity	Risk profile
Central Government Securities	6.77%-7.50%	High	Low
Corporate Debentures/PSU Bonds	6.95% - 7.80%	Moderate	Medium
CDs (short term)	6.95%-7.65%	High	Low
Commercial Paper (CP)	6.95%-7.70%	High	Low
Call Money	6.45%-6.85%	High	Low
Mibor linked Papers*	225-270 bps	Low	Low

*Current Yield Range for G-SEC and PSU is between 1 year and 15 year

* Range of spread between 5 year and 10 year AAA Corporate bond and OIS papers of similar maturity.

A brief description about yields presently available on Central Govt. Securities/ Bonds & Debentures of various maturities is as follows: Annualised yields (as on September 30, 2023) are:

Years	= < 1yr	1yr - 5yr	5yr - 10 yrs	10yrs - 30 yrs
Central Government securities	6.77%-7.10%	7.10%-7.40%	7.30%-7.45%	7.40%-7.50%
Debentures/Bonds (AAA rated)	6.95%-7.65%	7.65%-7.65%	7.65%-7.75%	7.70%-7.80%

The price and yield on various debt instruments fluctuate from time to time depending upon the macroeconomic situation, inflation rate, overall liquidity position, foreign exchange scenario etc. Also, the price and the yield varies according to maturity profile, credit risk etc.

Derivatives and Hedging

The scheme may use derivative instruments like Interest rate swaps, Forward rate agreements or such other derivative instruments as may be introduced from time to time for the purpose of hedging and portfolio balancing as may be permitted under the Regulations and Guidelines.

The sum total of derivative contracts outstanding shall not exceed 50% of the net assets of the scheme.

An interest rate swap is a financial contract between two parties exchanging a stream of interest payments for a notional principal amount on multiple occasions during a specified period.

Typically, one party receives a pre-determined fixed rate of interest while the other party receives a floating rate, which is linked to a mutually agreed benchmark with provision for mutually agreed periodic resets.

The fund intends to use derivatives for hedging & portfolio balancing as permitted under the SEBI Regulations & Guidelines.

To hedge & balance the portfolio, derivative instruments like interest rate swaps & forward rate agreements would be used to create synthetic fixed-rate bonds/floating rate bonds. We wish to submit that, creation of synthetic fixed-rate bonds/floating rate bonds is a hedging and portfolio rebalancing technique.

Each position taken in derivatives shall have an associated exposure as defined under. Exposure is the maximum possible loss that may occur in a position. However, certain derivative positions may theoretically have an unlimited possible loss. Exposure in derivative positions shall be computed as follows:

Position	Exposure
Long Future	Futures Price * Lot Size * Number of Contracts
Short Future	Futures Price * Lot Size * Number of Contracts
Option bought	Option Premium Paid * Lot Size * Number of Contracts.

An example is stated below to explain the said proposition.

Swaps can be used to create synthetic fixed-rate instruments.

Let us take the example of a 3 Yr floating rate bond with a spread of 50 bps (basis points) over a benchmark. Ordinarily, this fetches the investor a yield of the benchmark (which is floating) plus 50 bps on an annualized basis. However, by receiving the 3 yr fixed rate on the swap side, what happens is that the bond gets converted into a fixed rate bond. Let us assume that the 3 yr swap on the same benchmark is received for the same principal amount at the rate of 7.25%. Broadly then, the investor receives fixed cash flows of 7.25%, pays the floating benchmark rate, and receives the floating rate of the bond (which comprise the benchmark rate and the "spread" of 50 bps). The floating cash flows of the benchmark cancel each other out and the investor is left with a synthetic fixed-rate bond yielding him 7.75% (7.25% plus the 'spread' of 50bps). Thus through the swap, the floating rate bond gets converted 'synthetically' into a fixed rate bond.

Accounts are generally settled on a net basis on predetermined settlement dates. Accordingly, on each agreed payment date, amounts owed by each party is calculated by applying the agreed rate i.e. fixed in one case and floating in the other, on the notional amount. The party, who owes the higher amount i.e. the difference between the interest rate amount and the floating interest rate amount or vice versa, makes a payment of the net amount, no principal amount is exchanged.

Generally, interest rate swaps involve an exchange of a fixed rate to a floating rate of interest or vice versa. These are known as Plain Vanilla Swaps. The RBI has currently allowed only these swaps in the Indian market.

Example

The most common type of swaps is where one party agrees to pay a fixed rate of interest (fixed-rate payer) to the other party who agrees to pay a floating rate of interest (floating-rate payer). The payments are exchanged on designated dates during the life of the contract at agreed rates.

Suppose, the view on interest rate is that they would come down over the next three months if a particular investment is yielding a rate of return at 10% p.a. currently, the Fund Manager would like to lock-in this rate of return which in a downward interest rate scenario would appear attractive.

He, then, enters into a swap transaction with a counterparty that is willing to pay a fixed rate of 10% p.a. and accept a floating rate linked to say, MIBOR which would vary everyday but is currently at 7% p.a. The transaction would be represented thus:

Receives fixed rate @ 10% p.a.

TRUST Mutual Fund Counterparty B Pays Floating Rate MIBOR.

Note:

1. No principal amount is exchanged. A notional principal amount is agreed upon for interest calculation purposes.
2. Only the difference between the two rates is exchanged at agreed intervals or payment dates. When the fixed interest rate amount is higher, the fixed rate payer pays the difference amount i.e. fixed interest rate amount minus the floating interest rate amount or vice-versa.

Interest Rate Futures:

An Interest Rate Futures ('IRF') contract is "an agreement to buy or sell a debt instrument at a specified future date at a price that is fixed today." The underlying security for Interest Rate Futures is either Government Bond or T-Bill. Interest Rate Futures are Exchange-traded and standardized contracts based on 6 year, 10 year and 13 year Government of India Security and 91-day Government of India Treasury Bill (91DTB). These future contracts are cash-settled. These instruments can be used for hedging the underlying cash positions. The overall gross exposure for a fund is computed as the sum of exposure to cash, debt instruments and derivatives (other than for hedging purposes) and it should not be more than 100%. The derivative position is considered to be for hedging purposes only if the following conditions are met:

- 1) Perfect Hedging - We hedge the underlying using the IRF contract of the same underlying.
- 2) Imperfect hedging - the Underlying being hedged and the IRF contract has correlation of more than 90% of closing prices for the past 90 days. In case of a correlation is below 90% at any time the same may be rebalanced within 5 working days and if not rebalanced within the timeline, the derivative position created for hedging would be counted as an exposure. SEBI allows a maximum of 20% imperfect hedging, subject to applicable conditions mentioned in para 12.25 of the SEBI Master Circular.

Forward Rate Agreements (FRAs)

An FRA is a financial contract between parties agreeing to exchange interest payments for a notional principal amount on settlement dates for a specified period from the start date to the maturity date.

A FRA enables parties to fix interest cost on a future borrowing or fix an interest rate for a future investment.

Hedging a Future Asset

Example: Suppose, TRUST MF has funds to invest after two months for a period of three months. The Fund Manager expects interest rates to soften in the next two months. He, therefore, would like to lock-in the interest rate today for his investment to be made after two months. The instrument in which he wishes to invest is a 91-day Treasury Bill at 8.25% p.a. He, therefore, enters into an agreement where he sells a 2 x 5 FRA for a notional principal amount. 2 represent the start date of the FRA and 5 represents the maturity date or end date.

The details will be as under:

Asset: 91-day T' Bill

Tenor: 3 months commencing from 2 months from the date of the agreement.

Indicative 2 x 5: 8.25% p.a.

Benchmark: 91-day T' Bill cut-off yield on the last auction preceding settlement date

So TRUST MF receives 8.25% p.a. on the notional amount on the settlement date. The counterparty will receive a 91-day T' Bill cut-off rate on the 91-day T' Bill auction, on the auction, just preceding the settlement date.

Both, IRS and FRAs can be thus effectively used as hedging products for interest rate risks.

Risk Factors

Derivatives products carry the credit risk (risk of default by counterparty), market risk (due to market movements) and liquidity risk (due to lack of liquidity in derivatives).

1. No principal amount is exchanged. A notional principal amount is agreed upon for interest calculation purposes.
2. Only the difference between the two rates is exchanged at agreed intervals or payment dates. When the fixed interest rate amount is higher, the fixed rate payer pays the difference amount i.e. fixed interest rate amount minus the floating interest rate amount or vice-versa.

The Scheme will comply with provisions specified in para 12.25 of the SEBI Master Circular, related to overall exposure limits as stated below:

1. The cumulative gross exposure through equity, debt and derivative positions should not exceed 100% of the net assets of the scheme.
2. Mutual Funds shall not write options or purchase instruments with embedded written options.
3. Cash or cash equivalents with residual maturity of less than 91 days may be treated as not creating any exposure.

Exposure due to hedging positions may not be included in the above-mentioned limits subject to the following:

- Hedging positions are the derivative positions that reduce possible losses on an existing position in securities and till the existing position remains.
- Hedging positions cannot be taken for existing derivative positions. Exposure due to such positions shall have to be added and treated under permissible investment limits.
- Any derivative instrument used to hedge has the same underlying security as the existing position being hedged.
- The quantity of underlying associated with the derivative position taken for hedging purposes does not exceed the quantity of the existing position against which hedge has been taken.

For clarification it may please be noted that the scheme may enter into plain vanilla Interest Rate Swaps (IRS) for hedging purposes. The value of the notional principal in such cases shall not exceed the value of respective existing assets being hedged by the scheme.

In case of the scheme participation in IRS is through over the counter transactions, the counter party has to be an entity recognized as a market maker by RBI and exposure to a single counterparty in such transactions shall not exceed 10% of the net assets of the scheme. However, if the scheme is transacting in IRS through an electronic trading platform offered by the Clearing Corporation of India Ltd. (CCIL) and CCIL is the central counterparty for such transactions guaranteeing settlement, the single counterparty limit of 10% is not applicable.

There is no assurance or guarantee to the Unit holders as to the rate of pay-out under IDCW nor the payout will be paid regularly. When units are sold, and sale price (NAV) is higher than the face value of the unit, a portion of the sale price that represents realized gains is credited to an Equalization Reserve Account and which can be used to IDCW payout.
